QUESTION 1

What are the responsibilities of a cluster leader in a cluster of Aruba Mobility Controllers (MCs)? (Choose two.)

- A. To identify primary and secondary Mobility Controllers for APs
- B. To create a table to determine how a wireless client maps to a cluster member
- C. To identify a backup cluster leader for redundancy
- D. To manage the configuration of cluster members
- E. To automatically load balance clients if the load across cluster members changes

Correct Answer: BE

QUESTION 2

An administrator supports a RAP at a branch office. A user's device that is attached to the Ethernet port is assigned an 802.1X AAA policy and is configured for tunneled mode.

How is the user's traffic transmitted to the corporate office?

- A. It is not encapsulated by GRE and not protected with IPsec.
- B. It is encapsulated by GRE and protected with IPsec.
- C. It is not encapsulated by GRE but is protected with IPsec.
- D. It is encapsulated by GRE and not protected with IPsec.

Correct Answer: B

QUESTION 3

An AP connects to a controller. Then, the AP loses power and reboots.

Which parameters will the AP remember and use from its initial connection? (Select two.)

- A. AP group
- B. Server IP
- C. AP IP address and subnet mask
- D. Mobility Master IP

E. AirWave server name

Correct Answer: AB

QUESTION 4

An administrator needs to implement multiple configuration changes on a set of Aruba Mobility Controllers (MCs) that involve both VLAN and interface configurations at the same time. The controllers are deployed in a cluster.

How can the administrator accomplish this task?

- A. Apply pending changes, and schedule the changes to occur at a similar time.
- B. Create a template and deploy the changes by use of the bulk configuration update feature.
- C. Use AirWave to deploy the changes to respective controllers in the cluster.
- D. Use the Live Update (in-service update) feature for a cluster of controllers.

Correct Answer: B

QUESTION 5

An administrator needs to modify a VAP used for a branch office RAP. The VAP's operating mode is currently defined as backup and uses tunnel mode forwarding. The administrator wants to implement split-tunnel forwarding mode in the VAP.

Which WLAN operating mode must the administrator define for the VAP before the tunnel forwarding mode can be changed to split-tunnel?

- A. Persistent
- B. Standard
- C. Trusted
- D. Always

Correct Answer: B
