QUESTION 1

Northern Trail Outfitters recently acquired a company. Each company will retain its Identity Provider (IdP). Both companies rely extensively on Salesforce processes that send emails to users to take specific actions in Salesforce.

How should the combined companies' employees collaborate in a single Salesforce org, yet authenticate to the appropriate IdP?

- A. Configure unique MyDomains for each company and have generated links use the appropriate MyDomam in the URL.
- B. Have generated links append a querystring parameter indicating the IdP. The login service will redirect to the appropriate IdP.
- C. Have generated links be prefixed with the appropriate IdP URL to invoke an IdP-initiated Security Assertion Markup Language flow when clicked.
- D. Enable each IdP as a login option in the MyDomain Authentication Service settings. Users will then click on the appropriate IdP button.

Correct Answer: D

QUESTION 2

Universal containers (UC) uses an internal company portal for their employees to collaborate. UC decides to use salesforce ideas and provide the ability for employees to post ideas from the company portal. They use SAML-BASED SSO to get into the company portal and would like to leverage it to access salesforce. Most of the users don't exist in salesforce and they would like the user records created in salesforce communities the first time they try to access salesforce. What recommendation should an architect make to meet this requirement?

- A. Use on-the-fly provisioning
- B. Use just-in-time provisioning
- C. Use salesforce APIs to create users on the fly
- D. Use Identity connect to sync users

Correct Answer: B

QUESTION 3

A security architect is rolling out a new multi-factor authentication (MFA) mandate, where all employees must go through a secure authentication process before accessing Salesforce. There are multiple Identity Providers (IdP) in place and the architect is considering how the "Authentication Method Reference" field (AMR) in the Login History can help.

Which two considerations should the architect keep in mind?

Choose 2 answers

- A. AMR field shows the authentication methods used at IdP.

- B. Both OIDC and Security Assertion Markup Language (SAML) are supported but AMR must be implemented at IdP.
- C. High-assurance sessions must be configured under Session Security Level Policies.
- D. Dependency on what is supported by OpenID Connect (OIDC) implementation at IdP.

Correct Answer: AB

QUESTION 4

Universal Containers (UC) is planning to deploy a custom mobile app that will allow users to get e-signatures from its customers on their mobile devices. The mobile app connects to Salesforce to upload the e-signature as a file attachment and uses OAuth protocol for both authentication and authorization. What is the most recommended and secure OAuth scope setting that an Architect should recommend?

- A. Id
- B. Web
- C. Api
- D. Custom_permissions

Correct Answer: D

QUESTION 5

A financial enterprise is planning to set up a user authentication mechanism to login to the Salesforce system. Due to regulatory requirements, the CIO of the company wants user administration, including passwords and authentication requests, to be managed by an external system that is only accessible via a SOAP webservice.

Which authentication mechanism should an identity architect recommend to meet the requirements?

- A. OAuth Web-Server Flow
- B. Identity Connect
- C. Delegated Authentication
- D. Just-in-Time Provisioning

Correct Answer: C
