QUESTION 1

A device receives a route update for network 172.19.0.0/16 from two different routing information sources.

In this scenario, which parameter will determine the active route?

A. the route learned from the next hop with the highest IP address

B. the route learned with the lowest default route preference

C. the route learned from the next hop with the lowest IP address

D. the route with the lowest metric

Correct Answer: D

QUESTION 2

Which statement is true when using the allow command and deny command attributes when creating user permissions?

A. If you allow and deny the same commands, the Junos OS will fail the commit check.

B. If you allow and deny the same command, the allow command permissions take precedence over the deny command permissions.

C. If you specify a regular expression for allow and deny with two variants of a command, both will be ignored.

D. The all login class permission bits take precedence over allow and deny when a user issues the rollback command.

Correct Answer: B

QUESTION 3

What is the decimal equivalent of 00000100?

A. 2

B. 4

C. 9

D. 12

Correct Answer: B

QUESTION 4
