```
user@host# show security nat
destination {
    pool dst-nat-pool-1 {
        address 192.168.1.200/32 port 80;
    }
    pool dst-nat-pool-2 {
        address 192.168.1.220/32 port 8000;
    }
    rule-set rs1 {
        fron zone untrust;
        rule r1 {
            match {
                destination-address 203.0.113.200/32;
                destination-port 80;
            }
            then {
                destination-nat pool dst-nat-pool-1;
            }
        }
        rule r2 {
            match {
                destination-address 203.0.113.200/32;
                destination-port 8000;
            }
            then {
                destination-nat pool dst-rat-pool-2;
            }
        }
    }
}
```

Which feature is enabled with destination NAT as shown in the exhibit?

A. NAT overload

B. block allocation

C. port translation

D. NAT hairpinning

Correct Answer: D

QUESTION 4

Click the Exhibit button.

```
[edit]
user@host# show security address-book
global {
     address dmz-net 192.168.150.0/24;
     address client-net 172.16.128.0/24;
     address web-servers 192.168.150.0/29;
}

[edit security policies]
user@host# show
from-zone trust to-zone dmz {
     policy p1 {
          match {
               source-address client-net;
               destination-address dmz-net;
               application [ junos-http junos-https ];
          }
          then {
               permit;
          }
     }
     policy p2 {
          match {
               source-address client-net;
               destination-address web-servers;
               application [ junos-http junos-https ];
          }
          then {
               deny;
          }
     }
     policy p3 {
          match {
               source-address any;
               destination-address any;
               application any;
          }
          then {
               deny;
          }
     }
}
global
     policy global-policy {
          match {
               source-address any;
               destination-address any;
               application any;
          }
          then {
               permit;
               log {
                    session-close;
               }
          }
     }
}
```

Referring to the exhibit, what will happen if client 172.16.128.50 tries to connect to destination

192.168.150.3 using HTTP?

A. The client will be denied by policy p2.

B. The client will be permitted by the global policy.

C. The client will be permitted by policy p1.

D. The client will be denied by policy p3.

Correct Answer: C

QUESTION 5

After an SRX Series device processes the first packet of a session, how are subsequent packets for the same session processed?

A. They are processed using fast-path processing.

B. They are forwarded to the control plane for deep packet inspection.

C. All packets are processed in the same manner.

D. They are queued on the outbound interface until a matching security policy is found.

Correct Answer: A
