### QUESTION 1

Which statement about IS-IS adjacencies is true?

- A. Adjacency formation between Level 2 routers must have different area IDs.
- B. Adjacency formation between Level 2 routers must have the same area ID.
- C. Adjacency formation between Level 1 routers must have the same area ID.
- D. Adjacency formation between Level 1 routers must have different area IDs.

Correct Answer: C

IS-IS hello PDUs establish adjacencies with other routers and have three different formats: one for point-to-point hello packets, one for Level 1 broadcast links, and one for Level 2 broadcast links. Level 1 routers must share the same area address to form an adjacency, while Level 2 routers do not have this limitation.

### QUESTION 2

Click the Exhibit button.

```
{master:0}[edit]
user@host# show firewall family ethernet-switching
filter block {
  term 1 {
    from {
      ip-protocol icmp;
    }
    then accept;
  }
  term 2 {
    from {
      ip-source-address {
        172.25.11.1/32;
      }
    }
    then discard;
  }
  term 3 {
    from {
      ip-destination-address {
        172.25.11.0/24;
      }
    }
    then discard;
  }
}
```

Referring to the exhibit, which two statements are correct? (Choose two.)

- A. All traffic destined to the 172.25.11.0/24 subnet will be discarded.

- B. SSH traffic received from host IP 172.25.11.2 will be accepted.
- C. Any traffic not matched by one of the terms will be discarded.
- D. ICMP echo requests destined to 172.25.11.10 will be accepted.

Correct Answer: CD

---

### QUESTION 3

Which area is reserved for the OSPF backbone?

- A. Area 0.0.0.0
- B. Area 1.1.1.1
- C. Area 2.2.2.2
- D. Area 3.3.3.3

Correct Answer: A

---

### QUESTION 4

Which two statements are true about STP port states? (Choose two.)

- A. In the listening state, the port forwards all data packets.
- B. A port that has been administratively disabled under the STP protocol drops all BPDUs.
- C. In the learning state, the port drops all data packets.
- D. A port that has been administratively disabled under the STP protocol floods all BPDUs.

Correct Answer: BC

B: A port in the disabled state is manually isolated from the network. A port in the disabled state does not participate in frame forwarding or the operation of STP because a port in the disabled state is considered non-operational.

C: The learning state is a 15-second interval during which the bridge does not pass user data frames while the bridge is building its bridging table. As the bridge receives frames, it places the source MAC address and port of each frame into the bridging table. The learning state reduces the amount of flooding required when data forwarding begins.

---

### QUESTION 5

Click the Exhibit button.

```
[edit]
user@host# show protocols isis
level 2 disable;
interface ge-0/0/1.0;
interface ge-0/0/2.0;
interface ge-0/0/3.0;
interface lo0.0;

[edit]
user@host#
```

Referring to the exhibit, which two statements are true? (Choose two.)

- A. The device will not form adjacencies with devices in a different area;
- B. The Level 2 database will be empty.
- C. The IS-IS protocol is disabled on the device.
- D. The device will not have a Level 2 database.

Correct Answer: AB
