#### QUESTION 5

You are required to deploy a security policy on an SRX Series device that blocks all known Tor network IP addresses. Which two steps will fulfill this requirement? (Choose two.)

- A. Enroll the devices with Juniper ATP Appliance.
- B. Enroll the devices with Juniper ATP Cloud.
- C. Enable a third-party Tor feed.
- D. Create a custom feed containing all current known MAC addresses.

Correct Answer: AB

Explanation: To block all known Tor network IP addresses on an SRX Series device, the following steps must be taken:

Enroll the devices with Juniper ATP Appliance or Juniper ATP Cloud: both of these services provide threat intelligence feeds that include known IP addresses associated with the Tor network. By enrolling the SRX Series device, the device

will have access to the latest Tor network IP addresses, and it can then use this information to block traffic from those IP addresses. Creating a custom feed containing all current known MAC addresses, is not a valid option since Tor network

uses IP addresses, MAC addresses are not used to identify the Tor network.

Enable a third-party Tor feed may be used but it's not necessary as Juniper ATP Appliance and Juniper ATP Cloud already provide the same feature.
