QUESTION 1

Which three types of ports are used for Junos Fusion Enterprise? (Choose three.)

- A. extended port
- B. authenticated port
- C. cascade port
- D. uplink port
- E. designated port

Correct Answer: ACD

QUESTION 2

You want to view the VLANs that have been created dynamically using MVRP. Which operational mode command will display this information?

- A. show mvrp registration-state
- B. show mvrp dynamic-vlan-memberships
- C. show mvrp interface
- D. show mvrp applicant-state

Correct Answer: B

QUESTION 3

You are enabling MSTP in your Layer 2 network to prevent loops.

In this scenario, which three parameters must match on all switches in the network? (Choose three.)

- A. bridge priority
- B. revision level
- C. MSTI-to-VLAN mapping
- D. configuration name
- E. max age

Correct Answer: BCD

QUESTION 4

Click the Exhibit button.

```
[edit class-of-service]
user@SRX# show
classifiers {
    dscp ent-standard {
        import default;
        forwarding-class expedited-forwarding {
            loss-priority high code-points 101111;
        }
    }
}
interfaces {
    ge-* {
        unit 0 {
            classifiers {
                dscp ent-standard;
            }
        }
    }
}

[edit firewall]
user@SRX# show
family ethernet-switching {
    filter classify-voice {
        term 1 {
            from {
                forwarding-class expedited-forwarding;
            }
            then {
                accept;
                policer rate-limit-ef;
            }
        }
        term 2 {
            then accept;
        }
    }
}
policer rate-limit-ef {
    if-exceeding {
        bandwidth-limit 10m;
        burst-size-limit 25k;
    }
    then forwarding-class best-effort;
}
```

You are implementing CoS for a custom application that is labeling its packets with DSCP code-point 101111. You have applied the configuration shown in the exhibit, but note that while some custom application traffic ingressing on ge-0/0/1 transits the SRX Series device successfully, packets ingressing all other ge-* interfaces are being dropped.

Which action should you take to solve this problem?

- A. Apply the rate-limit-efpolicer to all ge- interfaces.
- B. Remove the BA classifier from all ge- interfaces.
- C. Configure a scheduler and scheduler map for expedited-forwarding and apply to all interfaces.
- D. Modify the BA classifier to assign code point 101111 to loss priority low.

Correct Answer: D

QUESTION 5

Click the Exhibit button.

```
[edit]
user@Router-1# show
. . .
interfaces {
  ge-0/0/1 {
    unit 0 {
      family inet {
        address 10.50.50.1/24;
      }
      family inet6 {
        address 2001::1/64;
      }
    }
  }
  ge-0/0/2 {
    unit 0 {
      family inet {
        address 172.100.100.100/24;
      }
    }
  }
  lo0 {
    unit 0 {
      family inet {
        address 192.168.1.1/32;
      }
    }
  }
}
protocols {
  ospf3 {
    realm ipv4-unicast {
      area 0.0.0.0 {
        interface ge-0/0/2.0 {
          passive:
        }
      }
    }
    area 0.0.0.0 {
      interface ge-0/0/1.0;
    }
  }
}

```

```
[edit]
user@Router-2# show
. . .
interfaces {
  ge-0/0/1 {
    unit 0 {
      family inet {
        address 10.50.50.2/32;
      }
      family inet6 {
        address 2001::2/64;
      }
    }
  }
  ge-0/0/2 {
    unit 0 {
      family inet {
        address 172.101.101.100/24;
      }
    }
  }
}

```

There is a functioning OSPFv3 neighborship between Router-1 and Router-2 over the ge-0/0/1 link. However, the 172.100.100.0/24 and 172.101.101.100/24 routes are not being shared through OSPFv3.

Referring to the configuration shown in the exhibit, which two actions must you take to solve the problem? (Choose two.)

- A. Add interface ge-0/0/1 under the IPv4 unicast realm for both routers.
- B. Add the IPv6 family protocol under ge-0/0/2 for both routers.
- C. Add the lo0 interface under OSPFv3 for both routers.
- D. Add interface ge-0/0/2 under OSPFv3 for both routers.

Correct Answer: AB
