QUESTION 1

The ePO administrators have already tuned and configured dynamic application containment rules within the policy. In which of the following ways will dynamic application containment protect against malware once enforcement is enabled?

A. The scan engine will learn the behavior of the application and send up to GT1 for analysis, and then receive an action to block all actions from the application\\'s process.

B. If an application\\'s reputation is below the threshold while triggering a block rule and is not an excluded application, malicious behavior of the application will be contained.

C. The ENS client will receive the reputation as "highly suspicious" from either the McAfee GTI or TIE server, and then immediately uninstall the application on the system.

D. The adaptive threat protection scanner will send the file automatically to a preconfigured "Sandbox" folder and analyze the application for malicious features before use.

Correct Answer: B

QUESTION 2

Which of the following is the benefit of a TIE server with regard to the Adaptive Threat Protection module?

A. It communicates with McAfee GTI for file and certificate reputation for malicious code.

B. It is required, and the Adaptive Threat Protection will only work with the TIE server.

C. The Threat Protection cache flushes when the reputation rules change.

D. The stored file and certificate reputations are locally stored, making the remediation automatically quicker.

Correct Answer: A

QUESTION 3

An administrator wants to know how many machines have exploit prevention enabled. Which of the following dashboards installed with ENS should the administrator look at?

A. Endpoint Security: Environmental Health

B. Endpoint Security: Threat Behavior

C. Endpoint Security: Content Status

D. Endpoint Security: Installation Status

Correct Answer: C
