### QUESTION 1

You cloned the Integration branch to your local environment and imported the database dump from Integration. You performed composer install and bin/magento setup:install.

While placing an order using PayPal Express, the following error occurs:

PayPal gateway has rejected request. Security header is not valid (#10002: Security error).

What is the cause of this error?

- A. A new encryption key has been created on the setup:install action.
- B. The folder var/session has no write permissions for the web server user.
- C. PayPal Sandbox API credentials are not valid for the local environment.
- D. The PHP extension mcrypt has not been installed locally.

Correct Answer: C

---

### QUESTION 2

You upgraded an integration branch in your Magento Commerce Cloud project, but received an error during the deploy phase.

What are the two ways to review details about the deployment? (Choose two.)

- A. View the logs in the var/reports/ directory on the remote server
- B. View the exception.log file in the var/log/ directory
- C. View the deploy.log file in the /var/log/ directory
- D. View the cloud.log file in the var/log/ directory

Correct Answer: AC

---

### QUESTION 3

You add a new Composer dependency utilizing composer require. After testing composer install locally, you add the Composer lock and json files and perform a deployment. The build phase fails as Composer is unable to resolve the dependencies.

Why did this happen?

- A. The versions of PHP on your local environment and integration environment differ
- B. Your commit needs to contain the updated vendor folder

- C. The project cache should have been cleared with the magento-cloud:project-build-cache command
- D. You did not execute the install locally with --require-dev

Correct Answer: A

---

#### QUESTION 4

You want to move static content deploy to the build phase of deployments.

Which two actions do you take? (Choose two.)

- A. Download and commit app/etc/config.php from production
- B. Run ece-tools scd-deploy:set build on production
- C. Run ece-tools config:dump on production
- D. Use scp to copy app/etc/config.php from local to production

Correct Answer: BD

---

#### QUESTION 5

While launching a site migrated from Magento 1, you are instructed to change the website CNAME record in your DNS provider by Magento for go live.

What is the purpose of setting this record?

- A. Setting this record causes sent email to be properly authenticated and not show in junk folders.
- B. Setting this record enables the page caching service for your site.
- C. Setting this record is needed on Pro to allow upsizing servers without downtime.
- D. Setting this record reduces the time it takes for customers to start seeing your Magento 2 site.

Correct Answer: D
