**QUESTION 1**

You have an enumeration named truckStatus that has the following statuses:

1.  
Empty
2.  
Loaded
3.  
Completed

You have the following code:

You need to extend this enumeration and add the following statuses to the enumeration:

Quarantine, InTransit. You must then modify code that validates the switch statement.

Solution: Add a post handler to the method that checks the enumeration and logic for your new enumeration values using the integer value of the enumeration.

```
switch (truckTable.TruckStatus)
{
    case TruckStatus::Empty:
        Info("1");
        break;
    case TruckStatus::Loaded:
        Info("2");
        break;
    case TruckStatus::Completed:
        Info("3");
        break;
}
```

Does the solution meet the goal?

- A. Yes
- B. No

Correct Answer: B

---

## QUESTION 2

You add a field to the SalesTable entity by using an extension.

You need to ensure that the new field is available for use in forms, reports, and code.

What are three possible ways to achieve this goal? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Right-click the table and select Synchronize.
- B. Navigate to the Dynamics 365 menu and select Synchronize database.
- C. Right-click the solution and select Synchronize with database.
- D. Set the project property for Synchronize database on build to true and build the solution.
- E. Right-click the project and select Synchronize with database.

Correct Answer: BDE

---

### QUESTION 3

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company uses Dynamics 365 Finance. You are customizing elements for the extended data types (EDTs) shown in the following table.

```
[ExtensionOf(classStr(SalesLineType))]  
final class mySalesLineType_myExtension  
{  
    public int extensionMethodDayOfWeek()  
    {  
        return dayofwk(systemDateGet());  
    }  
}
```

You have a table named WorkCalendar. The table has a column named BasicCalendarID that uses the BasicCalendarID EDT.

You need to increase the length of the column by using an extension.

Solution: Create a derived EDT for CalendarName.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: B

Instead Solution: Create an extension for CalendarID.

We should extend CalendarID.

Note: There are several properties that can be customized on existing extended data types (EDTs) through extension:

You can only set the new String size to a value equal to or larger than the base EDT value. Label Help text Form help Country region codes String size

Reference: <https://docs.microsoft.com/en-us/dynamics365/fin-ops-core/dev-itpro/extensibility/modify-edt>

---

### QUESTION 4

You are a Dynamics 365 Finance developer.

You have a table named FMVehicle that contains a field named VehicleId. The table has a clustered index named

VehicleIdx on the VehicleId field. You declare a table buffer named vehicle to refer to the table.

You need to select all records from the FMVehicle table in ascending order based on VehicleId field in the vehicle variable.

Which embedded-SQL statement should you use?

- C. [ExtensionOf(tableStr(SalesLine))]  
public class SalesLine\_Extension  
{  
    boolean validateWrite(boolean \_skipCreditLimitCheck)  
    {  
        boolean ret;  
        ret = next validateWrite(\_skipCreditLimitCheck);  
        if (ret && this.SalesPrice < 0)  
        {  
            ret = false;  
        }  
        return ret;  
    }  
}
- D. [ExtensionOf(tableStr(SalesLine))]  
final class SalesLine\_Extension  
{  
    boolean validateWrite(boolean \_skipCreditLimitCheck)  
    {  
        boolean ret;  
        try  
        {  
            ret = next validateWrite(\_skipCreditLimitCheck);  
        }  
        catch  
        {  
            ret = false;  
        }  
        if (ret && this.SalesPrice < 0)  
        {  
            ret = false;  
        }  
        return ret;  
    }  
}

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Correct Answer: C

All select statements use a table variable to fetch records. The results of a select statement are returned in a table buffer variable, here vehicle.

**QUESTION 5**

DRAG DROP

You need to deploy the web portal integration solution.

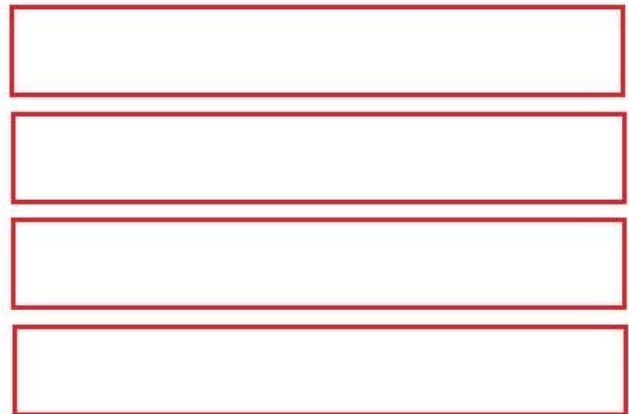

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

**Actions**

- Add the package to source control and check in changes.
- Build and create a deployment package.
- Import the model into a Development environment.
- Synchronize the models in the Developer environment by using **Get latest** feature.
- Import the model into the Build environment.
- Import the model into a QA environment.
- Import the deployment package in another development environment.

**Answer Area**

Correct Answer:

both

custom solutions and all the third party solutions.
