QUESTION 1

DRAG DROP

An organization uses Visual Studio to develop customizations for Dynamics 365 Supply chain Management.

You need to create an extension for the CustTable form and add the extension to the Visual Studio project.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Select the IsExtensible property for the CustTable form.	
In Solution Explorer, drag the CustTable form into the project.	
Rename the new CustTable extension.	
In the Application Object Tree (AOT), right-click the CustTable form and select Add to project .	
In the Application Object Tree (AOT), right-click the CustTable form.	
Select Create extension .	

Correct Answer:

Actions	Answer Area
Select the IsExtensible property for the CustTable form.	In the Application Object Tree (AOT), right-click the CustTable form and select Add to project .
In Solution Explorer, drag the CustTable form into the project.	Select Create extension .
	Rename the new CustTable extension.
In the Application Object Tree (AOT), right-click the CustTable form.

QUESTION 2

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company uses Dynamics 365 Finance. You are customizing elements for the extended data types (EDTs) shown in the following table.

```
if ( truckTable.TruckStatus == TruckStatus::Quarantine || truckTable.TruckStatus == TruckStatus::InTransit)
{
    Info("Extended");
}
```

You have a table named WorkCalendar. The table has a column named BasicCalendarID that uses the BasicCalendarID EDT.

You need to increase the length of the column by using an extension.

Solution: Create a derived EDT for BasicCalendarID.

Does the solution meet the goal?

- A. Yes
- B. No

Correct Answer: B

You can only modify the value if the EDT does not extend from another EDT.

Instead create an extension for CalendarID (not CalendarID).

<https://docs.microsoft.com/en-us/dynamics365/fin-ops-core/dev-itpro/extensibility/modify-edt>

QUESTION 3

You are a Dynamics 365 Finance developer.

Several users check out a custom form version control and modify the form.

You need to find the user that has added a specific line of code to the form.

What should you do?

- A. Open the object in Object Designer, select the title of the object, and then right-click View History.
- B. In Solution Explorer, navigate to the object and right-click View History.
- C. Using Visual Studio, navigate to the object. Add the object to a new solution, and then right-click View History.
- D. Using Visual Studio, navigate to the object in Application Explorer and right-click View History.

Correct Answer: B

QUESTION 4

You are Dynamics 365 Finance developer.

You need to initialize an embedded Microsoft Power BI report.

Which code segment should you add to the form initialization method?

- A. `initializeReportControlInternal(powerBIConfiguration,reportParameters,reportControl,showError)`
- B. `getPBIReportByResourceName(resourceName)`
- C. `importAndStorageReport(powerBIConfiguration,resourceName,isUpdate)`
- D. `initializeCustomReportControl(resourceName,formGroupControl,reportCustomParams)`

Correct Answer: D

QUESTION 5

DRAG DROP

You are a Dynamics 365 Finance developer.

You need configure table caching.

Which CacheLookup properties should you use? To answer, drag the CacheLookup properties to the correct table. Each property may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to

view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Answer Area

CacheLookup properties	Table type	CacheLookup property
EntireTable	Parameters	
NotInTTS	Transaction	
Found	Master data	
FoundAndEmpty	Region specific master data	

Correct Answer:

Answer Area

CacheLookup properties

- EntireTable
- NotInTTS
- Found
- FoundAndEmpty

Table type

- Parameters
- Transaction
- Master data

CacheLookup property

- EntireTable
- NotInTTS
- Found
- FoundAndEmpty

Region specific master data
