QUESTION 1

You need to display data on a new form. What should you do?

- A. Add a data source and create a design.
- B. Add a data source and set a caption.
- C. Add a data source and create a method.
- D. Add a form part and set a caption.

Correct Answer: A

A form data source is the database query, table, or view that a form uses to retrieve the data that is displayed by the form. The data source also defines a connection to the Application Object Server (AOS) that the form can use to create, update, or delete database records.

A data design element (controls) displays data on a form.

Incorrect:

Not B: A data source has no caption.

QUESTION 2

You need to identify which elements a job can contain.

Which two elements should you identify? Each correct answer presents part of the solution.

- A. Embedded methods
- B. Variable declarations
- C. Class instantiations
- D. Events

Correct Answer: AB

A: You can declare local functions inside a method or a job in X++. A local function can contain code that would otherwise have to be duplicated in two or more places within your method.

B: The following X++ job demonstrates that the print statement automatically converts any data type to a string. To create a job in the AOT, right-click the Jobs node, and then click New Job.

```
static void PrintJob2(Args _args)
```

```
{
```

```
str s1 = "Hello";
```

```
int n2 = 42;
```

```
utcDateTime udt3 = DateTimeUtil::utcNow();
```

```
Dialog dlog4 = new Dialog();
```

Etc.

QUESTION 3

You enable a feature for a Dynamics AX instance. What should you use?

- A. An extensible data security (XDS) policy
- B. A configuration key
- C. The Table Permissions Framework (TPF)
- D. A security key

Correct Answer: B

The administrator can enable or disable configuration keys to control the features and functionality that are available in Microsoft Dynamics AX.

Reference: Configure application functionality [AX 2012]

Incorrect:

Not A: XDS is a powerful mechanism that allows the ability to express and implement complex data security needs.

QUESTION 4

A table named Table 1 has a string field named Account Num.

You have an instance of Table 1 named table1.

You need to print the value of Account Num to the info log.

Which code segment should you use?

- A. Info (table1. Get Account Num ());
- B. Info (table1 Account Num());
- C. Info (int2str (table1. Account Num));
- D. Info (table1. Account Num);

Correct Answer: D

Just reference using the standard tablename.tablefield syntax.

QUESTION 5

You need to replace a value from a specific position of a container Which function should you use?

- A. ConDel
- B. ConPoke
- C. ConFind
- D. ConNull

Correct Answer: B

ConPoke modifies a container by replacing one or more of the existing elements.

Incorrect:

Not A: ConDel removes the specified number of elements from a container.

Reference: conPoke Function [AX 2012]
