QUESTION 1

You are working in a model that extends the Application Suite model, and you want to modify the insert method on the SalesLine table using X++ logic. The code looks like the following:

```
...  
salesLineType.inserted();
```

...
The salesLineType.inserted() method appears as follows:

```
public void inserted()  
{  
  
}
```

You need to create a class to run code prior to running the salesLineType.inserted() method in the SalesLineType.insert() method.

What should you do?

- A. Create a new class and extend the onlineserted event.
- B. Create a new class that extends the SalesLineType class. Overwrite the inserted method on your new class.
- C. Customize the SalesLine table. Overwrite the insert() method and add your code immediately before the salesLineType.inserted() method.
- D. Create a new class, and add a method that is a pre-event handler for the salesLineType.inserted() method.

Correct Answer: D

QUESTION 2

You create a new class named NewClass1 in a model. NewClass1 manipulates the CustTable table in the protected method modifyCustTable. NewClass1 has the following code:

```
class NewClass1
{
    public static MainClass1 construct()
    {
        return new MainClass1();
    }

    protected void modifyCustTable()
    {
        ...
    }
}
```

In the same model as NewClass1, you create a new class named NewClass2. You want to run the code in the modifyCustTable method from the callModifyCustTable method in NewClass2. What is a correct example of calling the modifyCustTable method from NewClass2?

```
) A. class NewClass2
    {
        public static NewClass2 construct()
        {
            return new NewClass2();
        }

        public void callModifyCustTable()
        {
            newClass1.modifyCustTable();
        }
    }

) B. class NewClass2 extends NewClass1
    {
        public static NewClass2 construct()
        {
            return new NewClass2();
        }

        public void callModifyCustTable()
        {
            this.modifyCustTable();
        }
    }
```

C.

```
{  
  
    public static NewClass2 construct()  
    {  
        return new NewClass2();  
    }  
  
    public void callModifyCustTable()  
    {  
        NewClass1 newClass1 = NewClass1::construct();  
        newClass1.modifyCustTable();  
    }  
}
```

D.

```
class NewClass2 extends NewClass1  
{  
  
    public static NewClass2 construct()  
    {  
        return new NewClass2();  
    }  
  
    public void callModifyCustTable()  
    {  
        this.construct().modifyCustTable();  
    }  
}
```

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: B

QUESTION 3

You are working in a Microsoft Dynamics365 for Retail environment and need to develop an app that can be installed on a tablet to calculate the sales total with tax for a given list of items.

The app must work if the tablet loses wireless connectivity.

Which type of interface should you use to develop the app?

- A. Modern POS
- B. User Interface
- C. eCommerce
- D. Cloud POS

Correct Answer: A

QUESTION 4

You are an Independent Software Vendor (ISV) developer.

You are working on a new solution that will support multiple languages and regions, and you need to use labels.

Which two best practices should you follow when using the labels? Each correct answer presents a complete solution.

- A. Use descriptive text for the label file ID
- B. Use the name of the model for of the label file name
- C. Use labels for elements and artifacts
- D. Use a new label ID for every element or artifact

Correct Answer: BC

QUESTION 5

You are an Independent Software Vendor (ISV) developer who is creating a new module in a solution. As part of the solution, you create a new menu.

You need the menu to appear in the list of modules available on the navigation pane.

What should you do to achieve this goal?

- A. Create an extension of the NavPaneMenu menu, and add a menu reference to the new menu
- B. Create an extension of the CommonMenu menu, and add a menu reference to the new menu
- C. Create an extension of the MainMenu menu, and add a menu reference to the new menu
- D. Create an extension of the StartPageMenu menu, and add a menu reference to the new menu

Correct Answer: C
