QUESTION 1

In an organization, the InfoSec team is investigating Anypoint Platform related data traffic.

From where does most of the data available to Anypoint Platform for monitoring and alerting originate?

A. From the Mule runtime or the API implementation, depending on the deployment model

B. From various components of Anypoint Platform, such as the Shared Load Balancer, VPC, and Mule runtimes

C. From the Mule runtime or the API Manager, depending on the type of data

D. From the Mule runtime irrespective of the deployment model

Correct Answer: B

QUESTION 2

When using CloudHub with the Shared Load Balancer, what is managed EXCLUSIVELY by the API implementation (the Mule application) and NOT by Anypoint Platform?

A. The assignment of each HTTP request to a particular CloudHub worker

B. The logging configuration that enables log entries to be visible in Runtime Manager

C. The SSL certificates used by the API implementation to expose HTTPS endpoints

D. The number of DNS entries allocated to the API implementation

Correct Answer: A

QUESTION 3

How are an API implementation, API client, and API consumer combined to invoke and process an API?

A. The API consumer creates an API implementation, which receives API invocations from an API such that they are processed for an API client.

B. The API client creates an API consumer, which receives API invocations from an API such that they are processed for an API implementation.

C. The API consumer creates an API client, which sends API invocations to an API such that they are processed by an API implementation.

D. The API client creates an API consumer, which sends API invocations to an API such that they are processed by an API implementation.

Correct Answer: C

QUESTION 4

What is most likely NOT a characteristic of an integration test for a REST API implementation?

A. The test needs all source and/or target systems configured and accessible.

B. The test runs immediately after the Mule application has been compiled and packaged.

C. The test is triggered by an external HTTP request.

D. The test prepares a known request payload and validates the response payload.

Correct Answer: D

QUESTION 5

What is a best practice when building System APIs?

A. Document the API using an easily consumable asset like a RAML definition

B. Model all API resources and methods to closely mimic the operations of the backend system

C. Build an Enterprise Data Model (Canonical Data Model) for each backend system and apply it to System APIs

D. Expose to API clients all technical details of the API implementation\\'s interaction with the backend system

Correct Answer: A
