QUESTION 1

Refer to exhibit:

Refer to the exhibit.

Why has an anomaly been triggered?

- A. Controller reached 2500 IOPS.
- B. Observed IOPS exceed normal values.
- C. Normal Controller behavior has increased.
- D. Observed values do not match predicted values.

Correct Answer: D

Explanation: Nutanix anomaly detection is a feature that monitors seasonal trends for time-series data (e.g. CPU usage, memory usage, latency, etc.) and establishes a "band" of expected values based on historical data¹². Only values that hit outside the "band" will trigger an event / alert¹.

Nutanix leverages a method for determining the bands called 'Generalized Extreme Studentized Deviate Test'. A simple way to think about this is similar to a confidence interval where the values are between the lower and upper limits

established by the algorithm.

Another web source³ shows an example of how anomaly detection works in Nutanix Prism Central. In the video, you can see that when the observed value of a metric deviates significantly from the predicted value based on historical data, an

anomaly event is triggered and displayed on a chart.

Therefore, by comparing the observed values with the predicted values based on historical data, Nutanix anomaly detection can identify abnormal behavior and alert you accordingly.

QUESTION 2

After logging into Prism Element, an administrator presses the letter A on the Keyboard. What is the expected outcome of this input?

- A. Alerts page will launch
- B. Analysis will launch
- C. About Nutanix page will launch
- D. API Explorer page will launch

Correct Answer: D

Explanation: API Explorer page will launch when an administrator presses the letter A on the keyboard after logging into Prism Element. This is one of the keyboard shortcuts that Prism Element provides for accessibility and ease of use¹. API Explorer is a tool that allows users to explore and test Nutanix REST APIs within Prism Element¹.

QUESTION 3

What is a requirement to enable Flow Networking?

- A. A dedicated virtual switch has been created for Flow Networking.
- B. Flow Micro segmentation must be enabled.
- C. Microservices infrastructure must be enabled.
- D. Prims Central is using a three-node scale-out deployment

Correct Answer: B

QUESTION 4

Which two methods are available when migrating a VM from a legacy 3-tier solution using VMware ESXi to AHV? (Choose two.)

- A. Deploy the Move appliance.
- B. Use Cross-Hypervisor DR.
- C. Import the .vmdk into the Image Service.

D. Use shared nothing live migration.

Correct Answer: AB

QUESTION 5

An administrator wants to expand the Failure Domain level of a cluster.

What two options are available? (Choose two.)

A. Node

B. Data Center

C. Block

D. Rack

Correct Answer: CD
