### QUESTION 1

When managing an open fracture, you should do which of the following?

- A. Cover the exposed bone ends with a moist sterile dressing.
- B. Provide mild manual traction to restore distal circulation.
- C. Leave the wound exposed if there is no massive bleeding from the area.
- D. Apply a pressure dressing to prevent blood loss.

Correct Answer: A

When bone is exposed, care must be taken to prevent further injury and infection. A good rule of thumb for the use of moist, sterile dressings is as follow: If the protruding part is normally on the inside of the body, cover it with a moist sterile dressing. Do not attempt to reinsert or reduce the exposed bone back into the body.

### QUESTION 2

Anaphyltic shock is a form of distributive shock where the blood vessels \_\_\_\_\_?

- A. Militate
- B. Constrict
- C. Leak
- D. Semipermeable

Correct Answer: A

Due to the chemical release from the immune system bronchioles constrict and blood vessels to dilate dropping the blood pressure. Capillaries become permeable and leak a little causing hives to form on the skin. Distributive shock is difficult to recognize in the field, heart rate remains relatively low, skin is flushed due to the dilatation of the blood vessels.

---

### QUESTION 3

Arriving on scene of a multi car accident the in charge EMT tells dispatch that they have arrived and what they have found. "Squad 3 on scene there is a three car accident all patients are out and walking on the scene." What is the this information called?

- A. Scene arrival notification
- B. Dispatch information
- C. Scene size up

D. Report to receiving facility

Correct Answer: C

A scene size up allows for several things 1) lets other responding companies to know what to expect once they arrive on scene. 2) Allows for an upgrading or downgrading of the assignment. 3) lets dispatch know what to expect in adding extra resources.

---

#### QUESTION 4
