-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

A customer has one storage virtual machine (SVM) that is using Fibre Channel as a protocol (FCP). Some clients are successfully accessing LUNs on this SVM. The zoning is done by using worldwide port names (WWPNs). The customer creates a second SVM for Fibre Channel and wants to access new LUNs in this SVM from the same clients.

Which three statements are true in this scenario? (Choose three.)

- A. The initiator groups (igroups) from the first SVM are also working for the second SVM.
- B. Fibre Channel zoning must be reconfigured for the new SVM.
- C. FCP must be enabled on the second SVM.
- D. Fibre Channel zoning does not need to be changed if the second SVM uses the same ports as the first SVM.
- E. You must map the new LUNs in the second SVM to the correct initiator group (igroup).

Correct Answer: ABC

QUESTION 2

You have installed and configured SnapDrive for Windows on a Windows server. Using SnapDrive, you successfully created two LUNs that are connected to the same storage controller using iSCSI. You later realize that SnapDrive is no longer enumerating one of the disks.

In this scenario, what would be a symptom of this problem?

- A. The SnapDrive service account user is a local administrator on the Windows server.
- B. The disk does not appear in Disk Management.
- C. The SnapDrive service is not running.
- D. There is a Snapshot copy mounted to the Windows server in a (busy,LUN) state.

Correct Answer: D

QUESTION 3

For the cluster network of a two-node cluster running Data ONTAP 8.3.1, which statement is true?

- A. Client traffic will never be sent across the cluster network, since ALUA automatically chooses the best path.
- B. Only the traffic that is required for a volume move operation is sent across the cluster network.
- C. Only configuration data is sent across the cluster network.
- D. Client traffic will be sent across the cluster network, if the LIF and the volume are not on the same node.

Correct Answer: C

**QUESTION 4**

A large amount of data was deleted from a volume. After a few hours, the space was still not available to NFS clients accessing the volume. What are two reasons that would account for this problem? (Choose two.)

- A. The volume contains Snapshot copies that were taken before the data was deleted.
- B. There is a thick-provisioned LUN in the volume.
- C. The deleted data was all deduplicated data.
- D. The client needs to re-scan the volume to detect the changes.

Correct Answer: AD

QUESTION 5

A customer recently had a controller module failure on a FAS62xx system running clustered Data ONTAP 8.3.1. The controller module had been replaced last night and everything is working well but the customer noticed warnings concerning licensing on the console. The warnings say there is a grace period of 89 days remaining.

In this scenario, what should be done to solve this problem?

- A. Execute a system restore to recover the previous license keys, and then apply to the new controller module.
- B. Apply the previously used license keys using the appropriate commands.
- C. Collect the new license keys from the new controller module packaging and install them using the appropriate commands.
- D. Obtain new 8.2x format license keys and install them using the appropriate commands.

Correct Answer: D
