QUESTION 1

Consult the _____ to determine the current link status of a host port. (Choose the best answer.)

A. Storage Array Profile

B. Real-time performance monitor

C. Recovery Guru

D. Unreadable Sectorslog

Correct Answer: A

QUESTION 2

With ALUA support, how does the storage system handle I/Os to the non-preferred path? (Choose the best answer.)

A. The controller handles them normally, updating both controllers\\'cache to maintain consistency, which is why ALUA requires cache mirroring to be enabled.

B. They are accepted but maintained in cache with a special change log, and only processed after 5 minutes when volume ownership may be changed.

C. They are shipped over to the owning controller to be managed, then returned through the non-preferred path after completion.

D. They are rejected with a specific SCSI check condition.

E. The non-owning controller takes ownership of the volume in order to handle them, then restores ownership to the original controller.

Correct Answer: C

QUESTION 3

What happens if you choose one disk that has a capacity of 300 GB and five others that have a capacity of 900 GB for a volume group? (Choose the best answer.)

A. All disks are recognized as 900 GB in capacity.

B. All disks are recognized as 300 GB in capacity.

C. Each disk is recognized as its particular capacity.

D. Mixing disk capacities is not supported in E-Series volume groups.

Correct Answer: C

QUESTION 4
