**QUESTION 1**

You are working for a customer that has deployed a large FlexGroup with ONTAP 9.5. This FlexGroup has a SnapMirror relationship to a system at a disaster recovery site. The FlexGroup is nearly full and needs to be expanded to accommodate additional data. In this scenario, what must you do to expand the FlexGroup and ensure that the data remains protected?

- A. Break the SnapMirror relationship, expand the source FlexGroup, and update the SnapMirror.
- B. Offline the source FlexGroup, add additional volumes, bring it online, and update the SnapMirror.
- C. Expand the source FlexGroup nondisruptively, and update the SnapMirror.
- D. Break the SnapMirror relationship, expand the source FlexGroup, and re-baseline the SnapMirror.

Correct Answer: D

QUESTION 2

You have an environment with multiple database servers that are performing scheduled nightly dumps. These dumps vary in both the time to complete and the size of data produced. You need to ensure that there is always enough room in the volume for the data and that a nightly SnapMirror update does not take place until the database dump process is complete.

In this scenario, which NetApp tool ensures that this process is completed every night?

- A. OnCommand Unified Manager
- B. OnCommand Insight
- C. OnCommand Workflow Automation
- D. OnCommand System Manager

Correct Answer: D

QUESTION 3

A customer has a 2-node ONTAP Select HA cluster deployed on the same site. The ONTAP Deploy VM has been accidentally deleted. The 2-node ONTAP Select HA cluster is still serving data, but the storage failover capability has been disabled. In this scenario, what would you do to reestablish the storage failover capability on your cluster?

- A. Deploy two ONTAP Deploy VMs and a new 2-node ONTAP Select cluster and then migrate the data.
- B. Deploy a secondary ONTAP Deploy VM and restore the 2-node cluster quorum.
- C. Deploy two single-node ONTAP Select clusters and migrate all exiting data.
- D. Deploy a new 4-node ONTAP Select cluster and distribute data from the existing cluster.

Correct Answer: C

QUESTION 4

You want to determine the amount of cold data that can be tiered from a FabricPool-enabled aggregate. In this scenario, which feature satisfies this requirement?

- A. Inactive Data Reporting
- B. Information Lifecycle Management
- C. Object Store Profiler
- D. Auto Balance

Correct Answer: A

First available in ONTAP 9.4, inactive data reporting (IDR) is an excellent tool for determining the amount of inactive (cold) data that can be tiered from an aggregate. IDR is enabled by default on FabricPool aggregates. More important, you can enable it on non-FabricPool aggregates by using the ONTAP CLI, to get visibility on how much you can gain by deploying FabricPool.

QUESTION 5

Click the Exhibit button.

Relationships

The screenshot shows the 'Relationships' page in OnCommand System Manager. At the top, there is a toolbar with 'Create', 'Edit', 'Delete', 'Operations', and 'Refresh' buttons. Below the toolbar is a table with columns for 'Source Storage Virtual...', 'Source Volume', 'Destination Vol...', and 'Destination Storag...'. The table contains one row with the following values: 'snap_src1', 'mirror_me', 'mirror_me_dest', and 'snap_src1'. Below the table, there are several configuration details for the relationship:

Source Location:	snap_src1:mirror_me	Is Healthy:	<input checked="" type="radio"/> Yes
Destination Location:	snap_src1_mirror_me_dest	Relationship State:	Uninitialized
Source Cluster:	cluster1	Network Compression	Not Applicable
Destination Cluster:	cluster1	Ratio:	
Transfer Schedule:	None		
Data Transfer Rate:	Unlimited		
Lag Time:	None		

At the bottom of the page, there are three tabs: 'Details' (which is selected), 'Policy Details', and 'Snapshot Copies'. A large 'Pass4Lead.com' watermark is overlaid diagonally across the center of the screenshot.

Your customer wants to protect a volume and replicate it to a secondary volume. The customer has tried to configure this relationship using OnCommand System Manager. Upon reviewing this newly configured relationship, you discover that the configuration does not satisfy the customer's stated requirements. Referring to the exhibit, what should you do to ensure that the volume is protected?

- A. Delete the relationship and recreate it.
- B. Resynchronize the relationship.
- C. Initialize the relationship.
- D. Change the schedule to hourly.

Correct Answer: A
