QUESTION 1

An administrator sees several inbound sessions identified as unknown tcp in the Traffic logs. The administrator determines that these sessions are from external users accessing the company's proprietary accounting application. The administrator wants to reliably identify this as their accounting application and to scan this traffic for threats.

Which option would achieve this result?

- A. Create an Application Override policy and a custom threat signature for the application.
- B. Create a custom App-ID and use the "ordered condition check box.
- C. Create an Application Override policy
- D. Create a custom App-ID and enable scanning on the advanced tab.

Correct Answer: A

QUESTION 2

A Security policy rule is configured with a Vulnerability Protection Profile and an action of Deny".

Which action will this configuration cause on the matched traffic?

- A. The configuration is invalid it will cause the firewall to Skip this Security policy rule A warning will be displayed during a command.
- B. The configuration is valid It will cause the firewall to deny the matched sessions. Any configured Security Profiles have no effect if the Security policy rule action is set to "Deny".
- C. The configuration will allow the matched session unless a vulnerability signature is detected. The "Deny" action will supersede the per. defined, severity defined actions defined in the associated Vulnerability Protection Profile.
- D. The configuration is invalid. The Profile Settings section will be- grayed out when the action is set to "Deny".

Correct Answer: C
