QUESTION 1

Which three tools can deploy metadata to production? (Choose three.)

- A. Change Set from Developer Org
- B. Force.com IDE
- C. Data Loader
- D. Change Set from Sandbox
- E. Metadata API

Correct Answer: ADE

QUESTION 2

A SSN_c custom field exists on the Candidate_c custom object. The field is used to store each candidate's social security number and is marked as Unique in the schema definition.

As part of a data enrichment process, Universal Containers has a CSV file that contains updated data for all candidates in the system. The file contains each Candidate's social security number as a data point. Universal Containers wants to upload this information into Salesforce, while ensuring all data rows are correctly mapped to a candidate in the system.

Which technique should the developer implement to streamline the data upload?

- A. Update the SSN_c field definition to mark it as an External Id.
- B. Upload the CSV into a custom object related to Candidate_c.
- C. Create a before insert trigger to correctly map the records.
- D. Create a Process Builder on the Candidate_c object to map the records.

Correct Answer: C

QUESTION 3

A sales manager wants to make sure that whenever an opportunity stage is changed to 'Closed Won', a new case will be created for the support team to collect necessary information from the customer. How should a developer accomplish this?

- A. Create a Process Builder to create the new case.
- B. Set up a validation rule on the Opportunity Stage.
- C. Create a lookup field to the Case object on the opportunity object.
- D. Create a workflow rule to create the new case.

Correct Answer: A

QUESTION 4

Management asked for opportunities to be automatically created for accounts with annual revenue greater than \$1,000,000. A developer created the following trigger on the Account object to satisfy this requirement.

```
for(Account a: Trigger.new){
    if(a.AnnualRevenue > 1000000){
        List<Opportunity> oppList = [SELECT Id FROM Opportunity WHERE accountId = :a.Id];
        if(oppList.size() == 0){
            Opportunity oppty = new Opportunity(Name = a.name, StageName = 'Prospecting',
            loseDate = system.today().addDays(30));
            insert oppty;
        }
    }
}
```

Users are able to update the account records via the UI and can see an opportunity created for high annual revenue accounts. However, when the administrator tries to upload a list of 179 accounts using Data Loader, It fails with system.

Exception errors.

Which two actions should the developer take to fix the code segment shown above?

Choose 2 answers

- A. Check if all the required fields for Opportunity are being added on creation.
- B. Use Database.query to query the opportunities.
- C. Move the DML that saves opportunities outside the for loop.
- D. Query for existing opportunities outside the for loop.

Correct Answer: CD

QUESTION 5

A developer wrote the following two classes:

```
public with sharing class StatusFetcher {
    private Boolean active = true;
    private Boolean isActive(){
        return active;
    }
}

public with sharing class Calculator {
    public void doCalculations(){
        StatusFetcher sFetcher = new StatusFetcher();
        if(sFetcher.isActive()){
            // do calculations here
        }
    }
}
```

The StatusFetcher class successfully compiled and saved. However, the Calculator class has a compile time error. How should the developer fix this code?

- A. Change the class declaration for the statusFetcher class to public with inherited sharing.
- B. Make the is Active method in the StatusFetcher class public.
- C. Make the doCalculations method in the Calculation class private.
- D. Change the class declaration for the Calculator class to public with inherited sharing.

Correct Answer: B
