QUESTION 1

You need to provide the IT specialists with design diagrams. What should you provide?

A. Business process modeler (BPM)

B. AI Builder

C. Entity relationship diagram (ERD)

D. Dynamics 365 Product Visualize

Correct Answer: A

Scenario: IT specialists want to design Power BI reports. They need to understand the underlying table relationships of the system.

Business process modeler (BPM) in Microsoft Dynamics Lifecycle Services (LCS) is a tool that you can use to create, view, and modify repeatable implementations that are based on business process libraries. BPM helps you align your

business processes with industry-standard processes that are described by the American Productivity and Quality Center (APQC)

Incorrect Answers:

D: Product Visualize is a powerful tool of Dynamics 365 that uses augmented reality to aid the sales process where sellers are able to show customers a product right from their sales workflow on a mobile device.

Reference: https://docs.microsoft.com/en-us/dynamics365/fin-ops-core/dev-itpro/lifecycle-services/bpm-overview

QUESTION 2

You need to recommend a feature that erases agent workloads and resolves reported issues. What should you recommend?

A. Dynamics 365 Customer Service default functionality

B. Microsoft AppSource

C. Microsoft Store

Correct Answer: A

Scenario: Agents need a way to track reservation issues.

Use Dynamics 365 Customer Service to: Track customer issues through cases

Reference: https://docs.microsoft.com/en-us/dynamics365/customer-service/overview

QUESTION 3

You need to recommend a reporting solution for the organization.

Which two options should you recommend? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

A. AI Builder

B. SQL Server Reporting Services (SSRS)

C. Dynamics 365

D. Power BI

Correct Answer: BC

Scenario:

1.

The reporting and analytics team must be able to create reports that include data from all facilities and all workers.

2.

Management reports must present an overview of the entire organization. Other reports may be limited to specific offices.

B: Power Apps apps can include reports that provide useful business information to the user. These reports are based on SQL Server Reporting Services and provide the same set of features that are available for typical SQL Server Reporting Services reports.

C: Microsoft Dynamics 365 online and Model-Driven PowerApps offers several advanced reporting options. Advanced reports are often necessary when business requirements demand complex calculations, returning multiple data sets, grouping large sets of data based on rules, and retrieving data from different data sources.

Incorrect Answers:

D: Scenario: Users cannot view Power BI reports within the Power Platform apps.

Note: Power BI enables data insights and better decision-making, while Power Apps enables everyone to build and use apps that connect to business data. Using the Power Apps visual, you can pass context-aware data to a canvas app,

which updates in real time as you make changes to your report.

QUESTION 4

HOTSPOT

You need to ensure that the solution meets the data security and compliance requirements.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

User type	Authentication model
Call center employee	**Azure AD and a security role** ← selected Azure AD and a web role Authenticated user and a security role Authenticated user and a web role
Repair service customer	Azure AD and a security role **Azure AD and a web role** ← selected Authenticated user and a security role Authenticated user and a web role
Third-party technician	Azure AD and a security role Azure AD and a web role Authenticated user and a security role **Authenticated user and a web role** ← selected

Correct Answer:

Answer Area

User type	Authentication model
Call center employee	Azure AD and a security role
	Azure AD and a web role
	Authenticated user and a security role
	Authenticated user and a web role
Repair service customer	Azure AD and a security role
	Azure AD and a web role
	Authenticated user and a security role
	Authenticated user and a web role
Third-party technician	Azure AD and a security role
	Azure AD and a web role
	Authenticated user and a security role
	Authenticated user and a web role

Box 1: Assign: Cascade None

Scenario: Worker still records must be archived after ten years and are then removed from the main system.

Assign: The referenced table record owner is changed.

Cascade None: Do nothing.

Incorrect Answers:

Cascade All: Perform the action on all referencing table records associated with the referenced table record.

Box 2: Delete: Restrict

Scenario: Worker information must not be deleted from the system while skill and job placement history records for the worker exist in the system.

Referential, Restrict Delete: In a referential, restrict delete relationship between two tables, you can navigate to any related rows. Actions taken on the parent row will not be applied to the child row, but the parent row cannot be deleted while

the child row exists. This is useful if you do not want child rows to become orphaned. This forces the user to delete all of the children before deleting the parent.

QUESTION 5

A company provides mobile diagnostic imaging services. You are designing a Power Apps solution to manage patient appointments and procedures.

Patient records are stored within the company\\'s cloud patient billing system. The patient ID must be the only information stored within the app. The patient name and date of birth must be visible to the technician to verify the patient\\'s identity.

You need to recommend a solution to display the patient information.

What should you recommend?

A. Virtual table

B. Business rule

C. Privacy preference

D. Data gateway

E. Custom dataflow

Correct Answer: A

A virtual table is a custom table in Microsoft Dataverse that has columns containing data from an external data source. Virtual tables appear in your app to users as regular table rows, but contain data that is sourced from an external database, such as an Azure SQL Database. Rows based on virtual tables are available in all clients including custom clients developed using the Dataverse web services.

Incorrect Answers:

D: The On-premises data gateway provides secure data transfer between on-premises data sources and your Azure Analysis Services servers in the cloud.

Reference: https://docs.microsoft.com/en-us/powerapps/maker/data-platform/create-edit-virtual-entities
