QUESTION 1

You need to resolve the issue reported during testing. What should you do?

- A. Create an image data type within the Inspection Order table.
- B. Create a relationship within the Inspection Order table to the originating inspection order.
- C. Create a Quick View form for the inspection order.

Correct Answer: A

Need to store the image in the table.

Scenario: The company uses photos of employees to generate employee badges. Photos are uploaded into Microsoft 365 user profiles.

QUESTION 2

You need to recommend the field type to use for configuring meal selections during reservation.

Which field type should you recommend?

- A. Global Option Set
- B. Lookup
- C. Option Set
- D. Two Options

Correct Answer: C

Scenario:

1.

Customers can select a meal when they make a reservation and can save the meal choices as a customer preference.

2.

The company offers two types of meals: standard and vegetarian. Meal types can be temporarily unavailable. The airline is considering offering other meal types, such as gluten-free and low-sodium options.

In PowerApps Option set is one of the field types you can use in your Entity. The information type that Option Set stores is a list of text values. And here comes the Option Set advantage - once you define its text values you can centrally managed it.

Example:

| Country Name |
|--------------|
| Poland |
| USA |
| England |
| India |

Incorrect Answers:

A: Typically, you use global option sets to set fields so that different fields can share the same set of options, which are maintained in one location. Unlike local options sets which are defined only for a specific attribute, you can reuse global option sets. You will also see them used in request parameters in a manner similar to an enumeration.

QUESTION 3

You are designing a Microsoft Power Platform solution that will include multiple applications.

You have the following requirements:

Support agents managing cases.

Project managers reviewing and updating their projects.

Stock managers managing warehouses.

New site visitors self-registering.

Employees tracking time entries.

Which three requirements can you meet by implementing role-based applications? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

A. New site visitors self-registering.

B. Support agents managing cases.

- C. Stock managers managing warehouses.
- D. Staff tracking time entries.
- E. Staff tracking time entries.

Correct Answer: BCE

QUESTION 4

You need to recommend technology for accessing historical job placement data. What should you recommend?

- A. Power Virtual Agents chatbots
- B. Virtual tables
- C. Power BI
- D. Power Automate flows

Correct Answer: B

A virtual table is a custom table in Microsoft Dataverse that has columns containing data from an external data source. Virtual tables appear in your app to users as regular table rows, but contain data that is sourced from an external

database, such as an Azure SQL Database. Rows based on virtual tables are available in all clients including custom clients developed using the Dataverse web services.

Scenario:

First Up uses an on-premises system to manage current and historical patient data including medications and medical visits.

The company plans to reference historical data in the existing system. The records held in these systems will not be migrated to the new solution except for medication information.

The solution must provide a worker appointment booking system that can access worker historical job placement data.

First Up staff members must be able to view and update worker records. They must be able to see current and historical job placement data on the same form in the new solution.

QUESTION 5

You are a Microsoft Power Platform solution architect working on a project. API calls are being sent between external applications and a Microsoft Power Platform solution.

The number of requests per user within a given time frame varies. Some users may be exceeding the service protection

API limits.

You need to ensure that the API conforms to service protection limits.

Which three metrics should you review? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. The number of requests that a user can make each day.
- B. The total number of requests that can be processed each day.
- C. The number of concurrent requests that a user can make.
- D. The total execution time for requests by all users.
- E. The combined execution time required to process requests from a user.

Correct Answer: ACE

Three types of service protection API limit errors that can be returned:

Number of requests

This limit counts the total number of requests during the preceding 300 second period.

Execution time

This limit tracks the combined execution time of incoming requests during the preceding 300 second period.

Concurrent requests

This limit tracks the number of concurrent requests.
