### QUESTION 1

You need to manage user access to the app.

Which two connection types should you recommend? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Virtual table with a customer connector
- B. Office 365 Outlook connector
- C. Microsoft Dataverse connector
- D. Office 365 Users connector

Correct Answer: CD

Office 365 Users lets you access user profiles in your organization using your Office 365 account. You can use the Use the connection in your Power Platform app.

Dataverse is part of the Microsoft 365 collaboration and productivity tools. Using federation, applications can connect to Dataverse using the same system user identities and credentials available in an Azure Active Directory based network.

Scenario:

1.

Users must be active employees of Fabrikam.

2.

Quality inspection app: Fabrikam is evaluating Microsoft Power Platform to determine whether it can meet the company's requirements for a manufacturing defect and quality inspection solution. Each machine produced must be subjected to a quality inspection at various points during production. Each machine must undergo a more extensive quality inspection before the machine can be shipped to the customer.

---

### QUESTION 2

You design integration with an external data source that uses sequential integer values as primary keys for the records contained in it. Data synchronization will occur in Microsoft Dataverse so users can access data.

Data within Microsoft Dataverse must be accurate against the data in the external data source.

You need to ensure that the data from the external data source does not create duplicated rows in Microsoft Dataverse.

Which two features should you use?

Each correct answer presents part of the solution.

- A. Webhook

- B. Change tracking
- C. Duplicate detection rules
- D. Upsert method
- E. Alternate key

Correct Answer: CE

### QUESTION 3

#### HOTSPOT

You need to ensure that the solution meets the data security and compliance requirements.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

## Answer Area

### User type

### Authentication model

Call center employee

- Azure AD and a security role
- Azure AD and a web role
- Authenticated user and a security role
- Authenticated user and a web role

Repair service customer

- Azure AD and a security role
- Azure AD and a web role
- Authenticated user and a security role
- Authenticated user and a web role

Third-party technician

- Azure AD and a security role
- Azure AD and a web role
- Authenticated user and a security role
- Authenticated user and a web role

Correct Answer:

## Answer Area

### User type

### Authentication model

Call center employee

Azure AD and a security role
Azure AD and a web role
Authenticated user and a security role
Authenticated user and a web role

Repair service customer

Azure AD and a security role
Azure AD and a web role
Authenticated user and a security role
Authenticated user and a web role

Third-party technician

Azure AD and a security role
Azure AD and a web role
Authenticated user and a security role
Authenticated user and a web role

Box 1: Assign: Cascade None

Scenario: Worker still records must be archived after ten years and are then removed from the main system.

Assign: The referenced table record owner is changed.

Cascade None: Do nothing.

Incorrect Answers:

Cascade All: Perform the action on all referencing table records associated with the referenced table record.

Box 2: Delete: Restrict

Scenario: Worker information must not be deleted from the system while skill and job placement history records for the worker exist in the system.

Referential, Restrict Delete: In a referential, restrict delete relationship between two tables, you can navigate to any related rows. Actions taken on the parent row will not be applied to the child row, but the parent row cannot be deleted while

the child row exists. This is useful if you do not want child rows to become orphaned. This forces the user to delete all of the children before deleting the parent.

---

#### QUESTION 4

You are evaluating a solution design for a model-driven app that will have a large number of complex forms.

Many of the forms take up to 10 seconds to load.

You need to recommend solution to speed up loading times for the forms.

Which two solutions should you recommend? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point.

- A. Consolidate and reduce scripts.
- B. Use synchronous JavaScript requests.
- C. Move scripts into the OnLoad event.
- D. Remove unnecessary fields.

Correct Answer: AD

D: Controls that require extra data beyond the primary record produce the most strain on form responsiveness and loading speed. These controls fetch data over the network and often involve a waiting period (seen as progress indicators) because it can take time to transmit the data.

Keep only the most frequently used of these controls on the default tab. Incorrect Answers:

B: Use asynchronous network requests when requesting data. Request data asynchronously rather than synchronously when extra data is necessary for customizations.

C: Moving scripts to the Onload event would slow down the loading of the form.

Reference: <https://docs.microsoft.com/en-us/powerapps/maker/model-driven-apps/design-performant-forms>

---

#### QUESTION 5

##### HOTSPOT

You are supporting the go-live process for a company. The company is responsible for migrating data to the Power Platform by using a custom solution.

The company reports the following issues:

1.

Migration processes fail due to operation timeouts.

2.

Records that include lookup columns often fail to load.

You need to recommend a solution.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

## Answer Area

### Requirement

### Technology option

Save captured images in an appropriate location.

	▼
Business process flow	
Desktop flow	
Instant cloud flow	
Automated cloud flow	

Analyze saved images by using an image recognition process.

	▼
Instant cloud flow and AI Builder	
Automated cloud flow and AI Builder	
Desktop flow and AI Builder	

Display data in real-time dashboards.

	▼
Dynamics 365 interactive experience dashboard	
Model-driven app dashboard with native graphs	
Model-driven app dashboard with Power BI	

Correct Answer:

## Answer Area

### Requirement

### Technology option

Save captured images in an appropriate location.

	▼
Business process flow	
Desktop flow	
Instant cloud flow	
Automated cloud flow	

Analyze saved images by using an image recognition process.
