### QUESTION 1

A company uses a Microsoft Excel spreadsheet to record raw material quality daily

The company's chief technology officer (CTO) wants to use a model-driven app to record the information.

The chief executive officer (CEO) will fund the development of the app for the CTO only if the CEO understands the benefits of using a model-driven app.

You need to identify the benefits of model-driven apps

Which two benefits of using a model-driven app should you identify? Each correct answer presents a complete solution.  
NOTE: Each correct selection is worth one point

- A. Users may use the same app on a mobile device, a tablet or a PC.
- B. The app contains prebuilt tables, forms, and views that reduce development time.
- C. Both staff members and anonymous users may use the app.
- D. The app may continue to use the existing Excel spreadsheet as a source of data.

Correct Answer: AB

The benefits of using a model-driven app include prebuilt tables, forms, and views that can reduce the development time and allow for customization. The app can be used on any device, including mobile devices, tablets, or PCs, making it easy for users to access the app from anywhere. While the app may use the existing Excel spreadsheet as a source of data, it is not a primary benefit. The ability to provide access to both staff members and anonymous users is not a benefit of model-driven apps.

---

### QUESTION 2

A company uses Dynamics 365 Supply Chain Management.

When a sales order is created for one of the customers that a specific user manages, a Microsoft Outlook task must be created to remind the user to perform any follow up activities that are required.

You need to implement the functionality to create Outlook tasks.

Which two features should you use? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. AI Builder
- B. Power Apps
- C. Business Events
- D. Power Automate
- E. Common Data Service

Correct Answer: CD

Business events in Microsoft Power Automate Business events can be consumed in Microsoft Power Automate via the application connector. The connector has a trigger that is named when a business event occurs. This trigger can be used to subscribe to any of the business events that are available in the target instance of the application.

Reference: <https://docs.microsoft.com/en-us/dynamics365/fin-ops-core/dev-itpro/business-events/business-events-flow>

**QUESTION 3**

**HOTSPOT**

You have version 1.0.0.0 of a published Power Apps app. You create and publish version 2.0.0.0 of the app. A customer goes through the process of restoring the previous version of the app.

How many versions of the app are displayed in the Version tab for the app? To answer, select the appropriate option in the answer area.

Hot Area:

## Answer Area

You will see 

	▼
1	
2	
3	
4	

 versions of the app.

Correct Answer:

## Answer Area

Provided versions 1.0.0.0 and 2.0.0.0 are both less than 6 months, the version restored by the customer will be saved as version 3.0.0.0 which means there will now be 3 versions Reference: <https://docs.microsoft.com/en-us/powerapps/maker/canvas-apps/restore-an-app>

### QUESTION 4

A company is creating a canvas app to track and analyze customer visits to their retail stores. Data about customer visits is stored on-premises at each retail store location.

The app must display data about customer visits when users launch the app. You need to ensure that the data is available for consumption by the app.

Which tool should you use?

- A. Data gateway
- B. Data source
- C. Connector
- D. Microsoft Dataverse
- E. Power Automate

Correct Answer: A

A data gateway is a tool that allows you to connect to on-premises data sources, such as the customer visit data stored at each retail store location in this scenario. The data gateway acts as a bridge between the on-premises data and the cloud-based Power Platform, allowing the canvas app to access and display the customer visit data in real-time.

It is important to note that this is not a definitive answer and the final decision should be taken after a careful analysis of the company's infrastructure and the data source.

**QUESTION 5**

DRAG DROP

A company plans to implement Power Apps in a Power Platform environment.

You need to implement other required components.

Match each option to its function. To answer, drag the appropriate option from the column on the left to its function on the right. Each option may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Select and Place:

Products	Function	Product
Microsoft Azure	Implement user authentication.	
custom connector	Send data to a Microsoft OneNote notebook in the same tenant.	
Microsoft Flow		
model-driven app		
canvas app		

Correct Answer:

Products	Function	Product
	Implement user authentication.	Microsoft Azure
custom connector	Send data to a Microsoft OneNote notebook in the same tenant.	Microsoft Flow
model-driven app		
canvas app
