QUESTION 1

How is the management external to the Scrum team involved in the daily scrum?

- A. The product owner speaks on their behalf
- B. The developers self-manage and they are the only management required at the daily scrum
- C. The scrum master speaks on their behalf
- D. The scrum master lets them know whether they need to be present

Correct Answer: B

Only the developers need to be present at the daily scrum, since they are self managing, that's all the management necessary.

QUESTION 2

Who is responsible for the sizing / estimate of the product backlog?

- A. Scrum team
- B. The product owner
- C. Developers
- D. The scrum master lets them know whether they need to be present

Correct Answer: C

The scrum guide says: "The Developers who will be doing the work are responsible for the sizing. The Product Owner may influence the Developers by helping them understand and select trade-offs."

QUESTION 3

What are the developers responsible for? (choose two)

- A. Resolving conflicts amongst the developers
- B. Selecting the product owner
- C. Organizing work required to meet the sprint goal
- D. Reporting productivity

Correct Answer: AC

They are concerned with everything that needs to happen to create a working increment. And they are self-managing, so resolving conflicts is something they should arrange as well.

QUESTION 4

What is pair programming?

- A. Managers doing performance reviews by comparing one programmer's code to another's
- B. Two developers writing code together, providing constant peer review
- C. Two programmers writing code separately, but always review each other's pull requests
- D. Developer and tester work together to write and test code

Correct Answer: A

Pair programming means that two developers are coding together and performing live peer review. This will enhance the affectivity as it leads to increased code quality.

QUESTION 5

How is architecture decided in a scrum team during a project?

- A. The developers emerge architecture as the system is created
- B. The architect works in the early part of each sprint to define the architecture of that sprint
- C. Upfront designs are presented to the developers prior to the first sprint
- D. The architecture cares for itself as code is written and deployed
- E. An architect on the team undertakes all architecture tasks

Correct Answer: A

Architecture emerges as more is created. There are often guidelines and principles in place.
