QUESTION 1

Choose three reasons why automated builds are important.

A. They support Continuous Integration

B. The eliminate the need for build engineers

C. They ensure your product remains bug free

D. They clearly define the build process

E. They allow frequent validation and ensure the product remains in a potentially releasable state

Correct Answer: ADE

Automated builds are making builds of the code after every change to the codebase. As soon as something breaks, the developers get informed. In order to automate it, the build process needs to be cleary defined. They\\'re a corner stone for CI.

QUESTION 2

What is a sprint burn down chart?

A. Visual representation of work that is still to do and time that is left

B. A chart showing progress towards the product goal

C. A chart that shows whether bugs came up

D. Visual representation of the product backlog items left

Correct Answer: A

QUESTION 3

Upon what type of process control is scrum based?

A. Deductive

B. Hybrid

C. Empirical

D. Technical

Correct Answer: C

If you are not sure, please review the Scrum theory section in the scrum guide

QUESTION 4

When more teams are working on the same product. How should they go about their definition of done?

A. Every team must make their own DoD, a meeting should be organised so that the differences are known.

B. It depends on the product owner

C. All development teams must have a DoD that makes their combined work releasable.

D. Every team uses its own. The differences are discussed in a hardening sprint.

Correct Answer: C

The product must be releasable and done must mean the same for all additions to the product. So they must have a DoD that can combined. There is no hardening sprint.

QUESTION 5

What event is timeboxed?

A. Daily Scrum

B. Sprint

C. Sprint planning

D. All of these

E. Sprint review

F. Sprint retrospective

Correct Answer: D

All the scrum events are timeboxed.
