QUESTION 1

WS-BPEL is an XML-based language that can be used to define business process logic that can be carried out via the composition of SOAP-based Web services. Select the correct answer.

- A. True
- B. False

Correct Answer: A

QUESTION 2

Which of the following statements is true? Select the correct answer.

- A. Service activities represent runtime activity that occurs within the underlying service logic.
- B. Service activities represent design-time message exchanges that are established between SOAP-based Web services and defined as part of the operation definition within the WSDL definition.
- C. Service activities represent runtime activity that occurs between services.
- D. Service activities represent runtime activity that occurs between complex and simple XML Schema types.

Correct Answer: C

QUESTION 3

Which of the following statements is true? Select the correct answer.

- A. Service agents are event-driven programs that always have published WSDL definitions.
- B. Service agents are event-driven programs that are automatically invoked to perform intermediary processing.
- C. Service agents are event-driven programs that are used only with asynchronous MEPs.
- D. Service agents are not event-driven programs.

Correct Answer: B

QUESTION 4

Which of the following statements makes sense? Select the correct answer.

- A. I designed a unique XML schema for each of my REST services so that the HTTP methods used by these services are consistently named.
- B. My REST services are limited to the use of the GET HTTP method because only one XML schema was designed for all of them. In order to support additional HTTP methods, additional XML schemas will need to be designed due to the

inherent dependency HTTP has on the XML Schema Definition Language.

C. I designed my REST services to share the same XML schema.

D. XML schemas cannot be used by REST services.

Correct Answer: C

QUESTION 5

Which of the following are associated with the functionality provided by a typical enterprise service bus? Select the correct answer.

A. reliable message delivery

B. intermediate message routing

C. temporary storage of messages in queues

D. All of the above.

Correct Answer: D
