QUESTION 1

A company runs an application on several Amazon EC2 instances that store persistent data on an Amazon Elastic File System (Amazon EFS) file system. The company needs to replicate the data to another AWS Region by using an AWS managed service solution

Which solution will meet these requirements MOST cost-effectively?

- A. Use the EFS-to-EFS backup solution to replicate the data to an EFS file system in another Region
- B. Run a nightly script to copy data from the EFS file system to an Amazon S3 bucket Enable S3 Cross-Region Replication on the S3 bucket
- C. Create a VPC in another Region Establish a cross-Region VPC peer Run a nightly rsync to copy data from the original Region to the new Region.
- D. Use AWS Backup to create a backup plan with a rule that takes a daily backup and replicates it to another Region Assign the EFS file system resource to the backup plan

Correct Answer: D

QUESTION 2

A company has data stored in an on-premises data center that is used by several on-premises applications. The company wants to maintain its existing application environment and be able to use AWS services for data analytics and future visualizations. Which storage service should a solutions architect recommend?

- A. Amazon Redshift
- B. AWS Storage Gateway for files
- C. Amazon Elastic Block Store (Amazon EBS)
- D. Amazon Elastic File System (Amazon EFS)

Correct Answer: B

QUESTION 3

A company's website provides users with downloadable historical performance reports. The website needs a solution that will scale to meet the company's website demands globally. The solution should be cost effective, limit the

provisioning of Into and provide the fastest possible response time.

Which combination should a solutions architect recommend to meet these requirements?

- A. Amazon CloudFront and Amazon S3
- B. AWS Lambda and Amazon Dynamo
- C. Application Load Balancer with Amazon EC2 Auto Scaling

D. Amazon Route 53 with internal Application Load Balances

Correct Answer: A

QUESTION 4

A company is adopting serverless architecture. The company's solutions architect wants to modernize an application that has source data in CSV format. A large team of developers needs to use the application to run SQL queries and reports on demand by joining data across multiple tables.

Which combination of actions will meet these requirements MOST cost-effectively? (Select TWO.)

- A. Store the source data in Amazon S3
- B. Load the source data into Amazon RDS
- C. Run on-demand reports and queries by using Amazon Athena
- D. Run on-demand reports and queries by using Amazon QuickSight
- E. Run on-demand reports and queries by using Amazon DynamoDB

Correct Answer: AC

QUESTION 5

A company is creating a new application that will store a large amount of data.

The data will be analyzed hourly and will be modified by several Amazon EC2 Linux instances that are deployed across multiple Availability Zones. The needed amount of storage space will continue to grow for the next 6 months.

Which storage solution should a solutions architect recommend to meet these requirements?

- A. Store the data in Amazon S3 Glacier. Update the S3 Glacier vault policy to allow access to the application instances.
- B. Store the data in an Amazon Elastic Block Store (Amazon EBS) volume. Mount the EBS volume on the application instances.
- C. Store the data in an Amazon Elastic File System (Amazon EFS) file system. Mount the file system on the application instances.
- D. Store the data in an Amazon Elastic Block Store (Amazon ESS) Provisioned IOPS volume shared between the application instances.

Correct Answer: C
