QUESTION 1

A technician is troubleshooting an issue with communication to another server at a remote location. Which of the following tools should the technician use to help troubleshoot the traffic to and from the server?

A. Net use

B. Nslookup

C. Port scanner

D. Sniffer

Correct Answer: A

QUESTION 2

Which of the following will allow devices to be added without turning the server off?

A. Plug and Play

B. Warm site

C. Hot plug

D. Hot site

Correct Answer: C

QUESTION 3

A technician receives a report that two users are having difficulty retaining connections to a server hosting a company application. On testing, the technician sees the following:

Initial connections to the server are sporadic.

If connected, the client is dropped within 30 seconds.

Attempting to reconnect is sometimes successful but other times requires multiple attempts.

Local testing on the server reveals no problems.

Given these symptoms, which of the following is the MOST likely cause of the problem?

A. Two workstations have been configured with the same IP address.

B. Two separate NICs have the same MAC address.

C. There are multiple DNS entries for the same host.

D. Routing has been configured incorrectly for the clients.
