QUESTION 1

Joe, a technician, wants to configure a server's networking information so he will no longer need to maintain a list of names and IP addresses in a file on the server. Which of the following will work BEST to accomplish this task?

- A. DHCP
- B. Hosts file
- C. DNS
- D. VLAN

Correct Answer: C

QUESTION 2

A company uses a hot-site, disaster-recovery model. Which of the following types of data replication is required?

- A. Asynchronous
- B. Incremental
- C. Application consistent
- D. Constant

Correct Answer: D

The type of data replication that is required for a hot-site disaster recovery model is constant. A hot site is a type of disaster recovery site that has fully operational IT infrastructure and equipment that can take over the primary site's functions immediately in case of a disaster or disruption. A hot site requires constant data replication between the primary site and the hot site to ensure that the data is up-to-date and consistent. Constant data replication means that any changes made to the data at the primary site are immediately copied to the hot site without any delay or lag.

QUESTION 3

A new virtual server was deployed in a perimeter network. Users have reported the time on the server has been incorrect. The engineer has verified the configuration, and the internal time servers are configured properly. Which of the following should the engineer do to resolve this issue?

- A. Check the firewall rules.
- B. Replace the CMOS battery in the server.
- C. Restart the time servers.
- D. Manually correct the time.

Correct Answer: A

QUESTION 4

A server administrator notices the `/var/log/audit/audit.log` file on a Linux server is rotating too frequently. The administrator would like to decrease the number of times the log rotates without losing any of the information in the logs. Which of the following should the administrator configure?

- A. Increase the audit.log file size in the appropriate configuration file.
- B. Decrease the duration of the log rotate cycle for the audit.log file.
- C. Remove the log rotate directive from the audit.log file configuration.
- D. Move the audit.log files to a remote syslog server.

Correct Answer: A

QUESTION 5

A systems administrator recently installed a new virtual server. After completing the installation, the administrator was only able to reach a few of the servers on the network. While testing, the administrator discovered only servers that had similar IP addresses were reachable. Which of the following is the most likely cause of the issue?

- A. The jumbo frames are not enabled.
- B. The subnet mask is incorrect.
- C. There is an IP address conflict.
- D. There is an improper DNS configuration.

Correct Answer: B
