QUESTION 1

Which Edge Gateway network service uses pool servers and virtual servers?

A. VPN

B. Load Balancer

C. DHCP

D. NAT

Correct Answer: B

QUESTION 2

An administrator needs to configure an alarm that notifies administrators if an application is impacted by overcommitment of memory resources. The environment consists of 100 virtual machines running on 5 ESXi hosts that are configured in a fully automated HA/DRS cluster. The cluster is configured with a parent resource pool and Production and Development child pools. Where should the administrator set the alarm to meet the requirement?

A. On each virtual machine

B. On each host

C. On the Production resource pool

D. On the cluster

Correct Answer: D

QUESTION 3

A vCAC administrator installs and configures a new vSphere Endpoint. Where should the administrator add the compute resource in order to use the new vSphere Endpoint?

A. to a Reservation

B. to an Enterprise Group

C. to a Blueprint

D. to a Provisioning Group

Correct Answer: B

QUESTION 4

Security policy requires that all administrative activity occurs through vCenter Server. Which action should a system

administrator take to meet this requirement?

A. Use the vSphere client to right-click the cluster and enable lockdown mode on every host in the cluster at once

B. Use the vSphere client to navigate to the Security Profile of each host and enable lockdown mode on each host

C. Logon to the DCUI and navigate the menu to Troubleshooting Options and enable lockdown mode

D. Logon to the ESXi Shell and type the command service lockdown start

Correct Answer: B

QUESTION 5

A new ESXi host has been added to vCAC, but is not visible in the Infrastructure Organizer. What would cause this issue?

A. The ESXi host is not a member of a Provisioning Group.

B. The vCAC Agent is not installed on the ESXi host.

C. The vCD Agent is not installed on the ESXi host.

D. The ESXi host is not a member of an Enterprise Group.

Correct Answer: D
