client
2/03/2017 19:00:32- end writing
can't connect to client (58)
```

- A. The version of NetBackup installed on the master server and media server is higher than the version installed on the client.
- B. The media server is unable to resolve the hostname of the client to any IP address.
- C. The required NetBackup processes need to be started on the client.
- D. The media server failed to perform a reverse name lookup of the IP address associated with the client.

Correct Answer: A

QUESTION 3

NetBackup has frozen some of the tapes added to the robot.

Which log must be enabled to determine why the tapes were frozen?

- A. ltid
- B. robots
- C. bptm
- D. vmd

Correct Answer: C

QUESTION 4

An administrator took media server mediaA offline for maintenance and set up a new media server mediaB with access to the previously backed up data. When restores are performed for data that was backed up by mediaA, the restores fail.

Which setting must the administrator modify to allow successful restores?

- A. from the master server, run bpimage to change the name of the media server from mediaA to mediaB
- B. set Enable unrestricted media sharing for all media servers in the master server host properties in the Media section
- C. in the BAR console, change the Server to use for backup and restores setting to mediaB
- D. verify both media servers are set up in the master server host properties in the Restore Failover section

Correct Answer: D

QUESTION 5

An administrator is preparing to perform disaster recovery for many clients whose backups are stored on multiplexed tapes.

Which host property should the administrator modify, prior to the restores, to ensure the best recovery time?

- A. set Enable unrestricted media sharing for all media servers
- B. increase Restore retries
- C. increase Delay on multiplexed restores
- D. add the client IP addresses to Resilient Networks

Correct Answer: A
