QUESTION 3

An administrator needs to use Backup Exec to protect a VMware environment. The datastore containing the VMware virtual machines is located on SAN disk storage. The Backup Exec server is also connected to the SAN infrastructure. The administrator needs to ensure the backup data only travels over the SAN.

How should the administrator proceed?

- A. enable forced SAN mode on the VMware vCenter server
- B. select the NBD transport option in backup properties
- C. use the transport mode priority list option to only select SAN transport mode
- D. enter the IP Address of the SAN data storage server

Correct Answer: D

QUESTION 4

An administrator targets a backup to a disk storage device, but the backup goes into a queued state due to insufficient disk space.

Which action should the administrator take to ensure the next backup completes successfully?

- A. split the backup into more than one backup job
- B. include only as much data as can fit on the disk storage device
- C. target the backup to a disk storage pool that has more than one device in the pool with sufficient space
- D. recreate the backup job

Correct Answer: C

QUESTION 5

Which two backup settings can be modified for a duplicate stage added to a backup job? (Choose two.)

- A. Schedule
- B. Security
- C. Notification
- D. Network
- E. Test run

Correct Answer: AC
