QUESTION 1

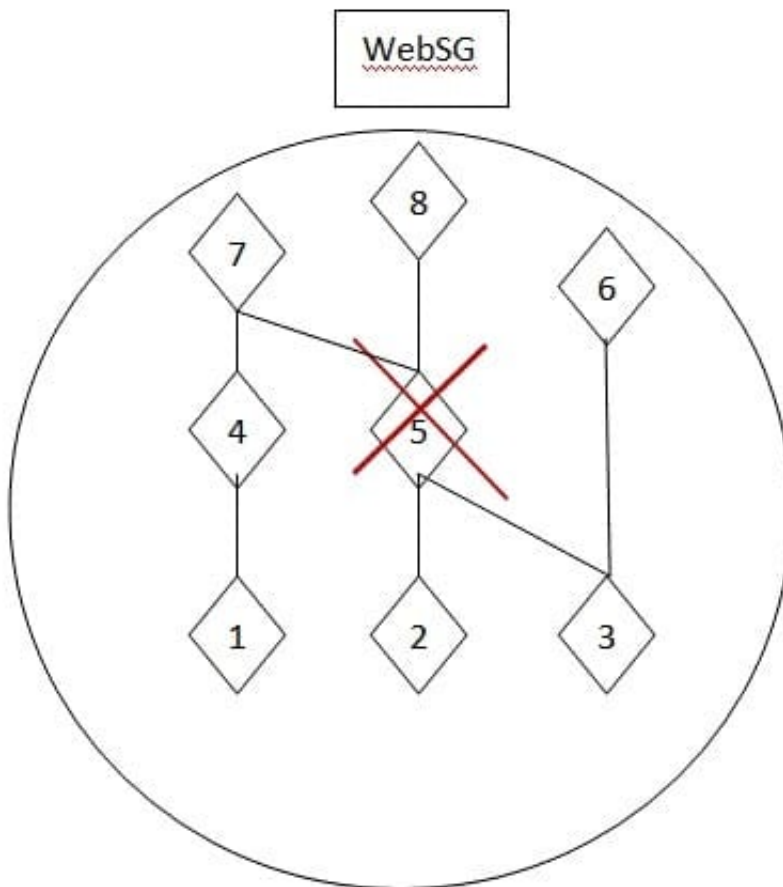

How many Microsoft SQL Server instances can a single SQL Server resource manage?

- A. 1
- B. 8
- C. 16
- D. 32

Correct Answer: A

QUESTION 2

Refer to the exhibit.

All resources displayed in the exhibit are non-critical.

Which two resources will be taken offline when resource 5 faults? (Select two.)

- A. 2
- B. 3
- C. 6
- D. 7
- E. 8

Correct Answer: DE

QUESTION 3

A two-system cluster has two independent heartbeat connections as the only heartbeat mechanisms.

What happens when one of the heartbeat connections is lost?

- A. Service group failover is disabled on system fault.
- B. Service group failover functions normally on system fault.
- C. Veritas Cluster Server automatically configures a low-pri heartbeat over the public net.
- D. Veritas Cluster Server automatically marks all service groups auto-disabled.

Correct Answer: A

QUESTION 4

What is a benefit of an active/active cluster configuration?

- A. Applications with different I/O and memory requirements run on the same system properly.
- B. Each server is configured to run a specific application.
- C. Applications only run on a primary server.
- D. Multiple applications that run on the same system always co-exist properly.

Correct Answer: B

QUESTION 5
