### QUESTION 2

An administrator configured a virtual machine to use an NVIDIA card but the virtual machine is not starting up. What could be the cause of the issue? (Choose two.)

- A. No suitable host could be found.
- B. Not all memory has been reserved on the VM.
- C. Not all CPU has been reserved on the VM.
- D. The Desktop Pool doesn't support 3D cards.
- E. 3D graphics cannot be used with local storage.

Correct Answer: AB

If you configure a graphics card, and the host has no resources available (all GPU memory used for example) or not all guest memory has been reserved, then the VM won't start. By process of elimination: Not all CPU has been reserved on the VM -> CPU reservation not necessary The Desktop Pool doesn't support 3D cards -> There is no mention of Horizon within this question. 3D Graphics cannot be used with local storage -> 3D Graphics is not dependant on storage.
