QUESTION 14

Mike\\'s company has deployed three IBM Notes Traveler servers in a virtual high availability environment. Server A has 2500 devices registered and Servers B and C have 2000 devices registered. Mike, the administrator, took Server A offline for Sunday\\'s scheduled maintenance session. He tested failover to the other servers in the pool and it was successful. The following Monday morning, the Help Desk received calls reporting that users were not receiving mail on their devices. Mike was unsure as to why the users gradually stopped receiving mail on the remaining servers. Mike brought Server A back online and the problem was resolved.

Why did the users fail to continue to receive mail?

A. Mike had not set the external server URL on Servers B and C.

B. Mike did not set the IP sprayer to spray in a round-robin fashion.

C. Mike failed over too many users and devices to the other servers in the pool.

D. Mike did not properly add Servers B and C to the pool by issuing the travelerUtil command.
