- ⚙️ **365 Days** Free Update
- ⚙️ **800,000+** Satisfied Customers

QUESTION 1

Avoid using named datasets to store:

- A. Credentials for use as login information for a system management tool.
- B. Configuration information that will be used in several different processes.
- C. Information for one-time use, such as Simple Object Access Protocol (SOAP) session IDs.
- D. Error messages that will be printed out and used by only a small subset of processes in the library.

Correct Answer: C

QUESTION 2

You are exporting automation objects from a User Acceptance Testing (UAT) environment to a production environment. You should provide instructions for groups that will: (Choose two)

- A. Invoke objects.
- B. Maintain the environment.
- C. Determine which processes can be split into subprocesses.
- D. Verify that the solution works according to functional requirements.

Correct Answer: AB

QUESTION 3

Which statements about JavaScript expressions in CA Process Automation are TRUE? (Choose two)

- A. The CA Process Automation Boolean dataset type maps to the JavaScript Boolean data type.
- B. JavaScript expressions in double quotation marks will result in an invalid expression error message.
- C. Dataset objects and their variables are accessed using JavaScript expressions in calculated parameters.
- D. JavaScript variables set in the pre-execution or the post-execution section of an operator can be accessed from the pre-execution or post-execution section of another operator.

Correct Answer: AC

QUESTION 4

When you are storing multiple versions of an object on an orchestrator, which factors do you need to consider? (Choose two)

- A. Any version can be edited and made current.
- B. Only the last version of an object checked in can be edited.
- C. Creating a baseline version enables you to check out and edit that baselined version.
- D. When the orchestrator starts running the current version of an object, it makes a copy of that object.

Correct Answer: AD

QUESTION 5

When planning your CA Process Automation implementation in production environments, you might need to consider factors such as high availability, fault tolerance, and scalability. Which capabilities help ensure that your automation solution meets such requirements? (Choose two)

- A. Executing a large amount of process instances concurrently
- B. Continuing process execution if an individual orchestrator or agent node fails
- C. Completing the execution of any given process instance within a defined period
- D. Continuing to run CA Process Automation processes in another environment if the main environment completely fails

Correct Answer: AB

QUESTION 6

You have installed a CA Process Automation agent on a host. Now you want to associate the current environment with the agent host. To do this, you need to configure:

- A. A module.
- B. A touch point.
- C. The domain orchestrator.
- D. CA Embedded Entitlements Manager (CA EEM).

Correct Answer: B

QUESTION 7

Which features characterize CA Process Automation package objects? (Choose three)

- A. They are exported as Java Archive (JAR) files.
- B. They can contain multiple versions of the same object.
- C. They enable you to define a collection of shortcuts to objects.

- D. They can be distributed with unrelated objects between several folders.
- E. They are primarily used to define and group variables that are used as parameters by multiple processes.

Correct Answer: BCD

QUESTION 8

When you plan your CA Process Automation deployment, which architecture-related factors should you consider? (Choose three)

- A. Multiple domains can be added to an environment.
- B. Installing a domain orchestrator creates a new CA Process Automation domain.
- C. Orchestrators and agents communicate bidirectionally to perform process operations.
- D. While agents can only exist in a single environment, orchestrators can be configured to be used in multiple environments.
- E. A new universally unique identifier (UUID) is generated in the Domain .xml file to identify any new environments you create.

Correct Answer: BCE

QUESTION 9

During which process development phase do you typically create a runbook?

- A. Requirements Analysis
- B. Testing and Deployment
- C. Design and Implementation
- D. Production and Maintenance

Correct Answer: A

QUESTION 10

From the CA Process Automation UI, you can perform various operations on automation objects, such as viewing, copying, pasting, renaming, searching, importing, and exporting. Which tab enables you to perform all these operations?

- A. Home
- B. Library
- C. Designer

D. Configuration

Correct Answer: B
