## 100% Passing Guarantee
## 100% Money Back Assurance

Following Questions and Answers are all new published by SpringSource Official Exam Center

**QUESTION 1**

Which of the following statements is true concerning Spring\\'s HttpInvoker remoting protocol? (select one)

A. HttpInvoker requires a web server to be running on the server

B. HttpInvoker is a synchronous remoting mechanism

C. The client invokes remote methods on the server using an HTTP POST

D. All of the above

Correct Answer: D

**QUESTION 2**

To register for a bean destruction callback, one can (Select one)

A. Decorate the destroy method with @PreDestroy

B. Decorate the destroy method with @PreDestroy and add a xml declaration

C. Set the bean instance in a "prototype" scope

D. Set the lazy-init attribute within the tag

Correct Answer: B

**QUESTION 3**

Identify the correct statement(s) regarding the tag (Select one or multiple answers)

A. Can only be used with AspectJ (as opposed to Spring AOP)

B. Enables the detection of @Aspect annotated classes

C. Allows to define a list of names to include so Spring is not going to scan all the beans at startup

Correct Answer: BC

**QUESTION 4**

Which is the correct statement regarding the relationship between a DispatcherServlet ApplicationContext and a root ApplicationContext (select one)

A. The root ApplicationContext can reference beans in the DispatcherServlet Application context, but not vice-versa

B. The DispatcherServlet ApplicationContext can reference beans in the root Application context, but not vice-versa

C. The DispatcherServlet ApplicationContext and the root ApplicationContext can reference each other\\'s beans

D. The DispatcherServlet ApplicationContext and root ApplicationContext are completely isolated and cannot reference each other\\'s beans

Correct Answer: B

**QUESTION 5**

Which of the following is the correct mechanism for using programmatic transactions in Spring? (Select one)

A. Use of the @Transactional annotation on each method which should be transactional

B. Use of the @Transactional annotation on the Class of methods which should all be transactional

C. Configuration in an XML configuration file using the Spring "tx" namespace

D. Use of the Spring TransactionTemplate

Correct Answer: D

**QUESTION 6**

Which of the following methods is NOT provided by the JmsTemplate? (select one)

A. setDefaultDestination

B. onMessage (asynchronous call)

C. convertAndSend

D. receiveAndConvert (synchronous call)

Correct Answer: B

**QUESTION 7**

Which of the following statements defines a "pointcut"? (select one)

A. A point in the execution of a program such as a method call or field assignment

B. A module that encapsulates advices

C. An expression that selects one or more join points

D. None of the above

Correct Answer: C

**QUESTION 8**

Which of the following is NOT a characteristic of Spring Remoting? (Select one)

A. It has its own proprietary naming directory service that remote services are published to

B. It supports multiple protocols and multiple forms of object serialization

C. It uses polymorphism on the client so that client code can be agnostic to whether it is using a remote service or local object

D. Spring beans can be published as remote services by simply adding configuration

Correct Answer: A

**QUESTION 9**

Which of the following statements is NOT true concerning the BeanPostProcessor Extension point? (Select one)

A. BeanPostProcessors are called during the init phase

B. BeanPostProcessors are called after the dependencies have been injected

C. BeanPostProcessors are called before the BeanFactoryPostProcessors have been called

D. Custom BeanPostProcessors can be implemented

Correct Answer: C

**QUESTION 10**

Which of the following statements is true with respect to Spring\\'s support for Object-Relational Mapping (ORM) libraries (select one)

A. Spring supports management of Hibernate Sessions or JPA PersistenceContexts in combination with local transactions

B. Spring provides support for translating exceptions thrown from ORM libraries into Spring\\'s own exception hierarchy

C. Spring provides FactoryBeans to configure each of the supported ORM libraries

D. All of the above is true

Correct Answer: D

**QUESTION 11**

Which of the following statements about use of the @Transactional annotation in a JUnit integration test is NOT true? (Select one)

A. Annotating a test with @Transactional will cause the test method to run in a transaction

B. Annotating a test class with @Transactional will cause all its test methods to run in transactions

C. Application code that runs in a transaction with REQUIRES_NEW propagation can have those changes rolled back by an @Transactional test

Correct Answer: C

**QUESTION 12**

If the propagation behavior is Propagation.REQUIRED, choose the statement which describes the propagation behavior (select one)

A. Executes in a transaction if one already exists. If there is no transaction, it executes without a transaction context.

B. Executes in a transaction if one already exists. Throws an exception if there is no active transaction.

C. Executes in a nested transaction if an active transaction exists. If there is no transaction, it starts a new one.

D. Executes in a transaction if one already exists. If there is no transaction, it starts a new one.

Correct Answer: D

**QUESTION 13**

You want to externalize constants from your Spring XML configuration file into a .properties file to your Spring beans. Which mechanism could you use? (select one)

A. Use a PropertyEditor

B. Use a PropertyPlaceholderConfigurer

C. Use

D. Use a BeanPostProcessor

Correct Answer: B

**QUESTION 14**

Which of the following statements defines an "aspect"? (select one)

A. An encapsulation of advice combined with a pointcut.

B. A point in the execution of a program such as a method call or field assignment

C. An expression that selects one or more join points

D. Code to be executed at a join point that has been selected by a Pointcut

Correct Answer: A

**QUESTION 15**

Which statement concerning Aspect Oriented Programming (AOP) is true (Select one)

A. AOP modularizes cross-cutting concerns

B. Spring AOP implements aspects using the Proxy pattern

C. Three of the advice types are "before", "after" and "around"

D. All of the above

Correct Answer: D
