QUESTION 1

To restore the configuration of a B-Series switch, which command is used?

- A. configDownload
- B. configUpload
- C. firmwareUpload
- D. restoreConfig

Correct Answer: A

QUESTION 2

What are two HBA vendors that EMC supports?

- A. Emulex and JCore
- B. Emulex and QLogic
- C. JCore and IBM
- D. QLogic and JCore

Correct Answer: B

QUESTION 3

When installing EMC PowerPath on a Solaris host, which command will initiate the install?

- A. install
- B. pkgadd
- C. ppinstall
- D. rpm

Correct Answer: B

QUESTION 4

ACME Corporation is deploying an AP-7420B multiprotocol switch to link two SAN fabric islands. The storage network administrator intends to set up connectivity through logical SANs (LSANs). During the deployment phase, a switchshow reveals port-15 attached to the edge fabric is segmented. The error reads Segmented: Domain ID overlap. What is the likely problem?

- A. The administrator connected to the wrong port of the edge switch.
- B. The administrator didn't set up the LSAN zones yet.
- C. The administrator plugged in the cables before the E_Ports were created.
- D. The administrator used the wrong port. Ports 0-3 support E_Ports.

Correct Answer: C

QUESTION 5

Which layer of the ARPA architecture does Ethernet represent?

- A. Application layer
- B. Network Interface layer
- C. Network layer
- D. Transport layer

Correct Answer: B

QUESTION 6

When creating AP-7420B LSANs, which step must be done before creating E_Ports?

- A. Create the LSAN zones.
- B. Install the FCRS license key.
- C. Merge the fabrics.
- D. Plug in the applicable switch cables.

Correct Answer: B

QUESTION 7

Which bits contain the Domain ID in a Fabric Channel address?

- A. First set of 8 bits
- B. Fourth set of 8 bits
- C. Second set of 8 bits
- D. Third set of 8 bits

Correct Answer: A

QUESTION 8

Which network topology is representative of network devices connected to multiple other network devices?

- A. Bus
- B. Mesh
- C. Ring
- D. Star

Correct Answer: B

QUESTION 9

What does the symconfigure command allow the end user to do?

- A. Create metaLUNs on a CLARiiON array
- B. Make configuration changes to a CLARiiON array
- C. Make configuration changes to a Symmetrix array
- D. Make Enginuity changes to a Symmetrix array

Correct Answer: C

QUESTION 10

In Control Center, which view shows only ports and fabrics that have viable connectivity?

- A. Masking
- B. Path Details
- C. Relationship
- D. Topology

Correct Answer: B

QUESTION 11

Which McDATA tool is used to manage multiple switches?

- A. Connectrix Manager
- B. Device Manager

- C. Fabric Manager
- D. SAN Manager

Correct Answer: A

QUESTION 12

A customer has finished configuring a B-Series switch. Which command is used to back up the switch configuration to a server?

- A. backupConfig
- B. configDownload
- C. configUpload
- D. firmwareDownload

Correct Answer: C

QUESTION 13

What is required for accessing SAN Advisor remotely?

- A. EMC Control Center SAN Advisor client must be installed on the local host.
- B. EMC Control Center SAN Advisor service must be running on the SAN AdvisorServer.
- C. EMC SAN Advisor Host Agent must be running on the local host.
- D. EMC SAN Advisor Remote Access Agent must be running on the SAN AdvisorServer.

Correct Answer: B

QUESTION 14

What does the s# represent in the device special file format of c##d#s#?

- A. LUN number
- B. SCSI controller number
- C. Slice partition number
- D. Target ID number

Correct Answer: C

QUESTION 15

Which service in Connectrix Manager automatically load balances traffic across FICON links, maximizes bandwidth, and reduces the number of ports required for cascaded links, thereby reducing the cost of the SAN?

- A. Advanced SAN Routing
- B. FICON Management Server
- C. Group Configuration Management
- D. Open Trunking

Correct Answer: D
