QUESTION 1

You have created a new Integration branch and did not receive the administrator email with the password reset link. What is prohibiting the email from sending?

- A. You have not enabled the Magento Email module with bin/magento module: enable
- B. The Outgoing Emails setting is disabled under Environment Settings in the Project Web UI
- C. Email is always disabled on all integration branches
- D. You have not configured SendGrid for this environment

Correct Answer: C

QUESTION 2

You need to test a data-related issue occurring on your Production environment. You replicate the data to your staging environment utilizing the Synchronization tool. When you access your staging environment you are redirected to your Production environment. Your project is on the Starter plan.

How do you prevent the redirect?

- A. Use the magento-cloud route:add command to create a route to the Staging URL
- B. Modify the yA3EXT0_CLOUD_ROUTES environment variable on your staging environment
- C. Enter the proper URL in the Routes for Staging under the Environment Settings in the Project Web UI
- D. Configure UPDATE_URLS to true in the .magento.env.yaml file

Correct Answer: D

QUESTION 3

You upgraded an integration branch in your Magento Commerce Cloud project, but received an error during the deploy phase.

What are the two ways to review details about the deployment? Choose 2 answers

- A. View the logs in the var/reports/ directory on the remote server
- B. View the exception.log file in the var/log/ directory
- C. View the deploy.log file in the /var/log/ directory
- D. View the cloud.log file in the var/log/ directory

Correct Answer: CD

QUESTION 4

You are reviewing a third party extension for Magento Commerce Cloud compatibility.

You discover the module writes to a custom directory called `internal/` within the Magento base directory.

The directory has to be shared by all web servers.

What do you do so the module can be used on Magento Commerce Cloud?

- A. Create a symlink from `/top/internal` to the `internal/` folder
- B. Declare a shared mount for the `internal/directory` in `.magento.app.yaml`
- C. Request the vendor make the directory configurable in the Magento admin
- D. Add a patch for extension so it uses the subdirectory `var/internal/` instead

Correct Answer: B

QUESTION 5

Your company decided to move a Magento store to a subdomain `https://shop.coinpany.ccm/` and redirect traffic from the old URL `http://company.com/` to the new one. Your company is using the Starter plan.

How do you implement the redirect?

- A. Configure a rewrite rule in the `.htaccess` file in the `pub` folder
- B. Submit a support ticket to add the redirect on the web-server level
- C. Add a route using the `MANGENTO_CLOUD_ROUTES` environment variable.
- D. Add a route into the `.magento/routes.yaml` configuration file

Correct Answer: D

QUESTION 6

You have a project deploying Static Content on the `deploy` phase. This process is optimized using the `scd_katrix` configuration in the `deploy` stage of the `.magento.env.yaml` file.

After moving the process to the `build` phase Static Content Deployment is no longer optimized and all themes and all locales are generating.

How do you resolve this?

- A. The `SCD_MATRIX` configuration is only used on the `deploy` phase
- B. Add the `--use_scd_matrix` flag to the `ece-tools build:generate` command in the `.magento.app.yaml` file
- C. Move the `scd_matrix` configuration to the `build` stage of the `.magento.env.yaml` file

D. Configure the variable ENABLE_SCD_MATRIX In the .magento.env.yaml file

Correct Answer: C

QUESTION 7

You are tasked to improve the user experience of the most visited product pages after deploying releases to Production. The aim is to reduce initial page load times.

How do you achieve this?

- A. Create a custom build command and use CURL to cache the page
- B. Use the Magento Admin to configure Fastly to cache the pages after deployment
- C. Modify the post_deploy hook in the .magento.app.yaml file to include the URLs as arguments to the ece-tools command
- D. Use the warm_up_PAGES variable in the .magento.env.yaml file to cache the pages during postdeploy

Correct Answer: D

QUESTION 8

While investigating an inherited Magneto Commerce Cloud project, you notice the following SCD_MATRIX configuration in magento , env, yaml:

```
stage:
  global:
    SCD_MATRIX:
      "magento/backend":
        language:
          - en_US
```

What is the effect of this configuration?

- A. Static content for frontend themes is generated during the deploy phase
- B. All frontend theme static content will be reused from the previous deployment
- C. Only the static content for the adminhtml area will be generated
- D. Static content for all locales will be generated for all frontend themes

Correct Answer: C

QUESTION 9

You need to specify the admin password using an environment variable.

You have created an environment variable `env:ADMIN_PASSWORD` with a valid password. When attempting to log in to the Magento Admin, it is not accepting the new password.

How do you correct the environment variable?

- A. The Sensitive option is checked by default and must be disabled
- B. The `env:ADMIN_PASSWORD` variable can only be used for an initial installation
- C. The environment variable should not have the `env:` prefix
- D. The `ADMIN_PASSWORD` variable should be configured via `.magento.env.yaml`

Correct Answer: B

QUESTION 10

You want to move static content deployment to the build phase of deployments. Which two actions do you take? Choose 2 answers.

- A. Download and commit `app/etc/config.php` from production
- B. Run `ece-tools scd-deploy:set build` on production
- C. Run `ece-tools config:dump` on production
- D. Use `scp` to copy `app/etc/config.php` from local to production

Correct Answer: BC
