100% Passing Guarantee  
100% Money Back Assurance

Following Questions and Answers are all new published by CWNP  
Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

### QUESTION 1

Many corporations configure guest VLANs on their WLAN controllers that allow visitors to have Internet access only. The guest traffic is tunneled to the DMZ to prevent some security risks. In this deployment, what risk is still associated with implementing the guest VLAN without any advanced traffic monitoring or filtering feature enabled?

- A. Intruders can send spam to the Internet through the guest VLAN.
- B. Peer-to-peer attacks can still be conducted between guest users unless application-layer monitoring and filtering are implemented.
- C. Guest users can reconfigure AP radios servicing the guest VLAN unless unsecure network management protocols (e.g. Telnet, HTTP) are blocked.
- D. Once guest users are associated to the WLAN, they can capture 802.11 frames from the corporate VLANs.

Correct Answer: A

---

### QUESTION 2

The following numbered items show some of the contents of each of the four frames exchanged during the 4-way handshake.

- 1.  
Encrypted GTK sent
- 2.  
Confirmation of temporal key installation
- 3.  
ANonce sent from authenticator to supplicant
- 4.  
SNonce sent from supplicant to authenticator, MIC included

Arrange the frames in the correct sequence beginning with the start of the 4-way handshake.

- A. 1, 2, 3, 4
- B. 3, 4, 1, 2
- C. 4, 3, 1, 2
- D. 2, 3, 4, 1

Correct Answer: B

---

**QUESTION 3**

In an IEEE 802.11-compliant WLAN, when is the 802.1X Controlled Port placed into the unblocked state?

- A. After EAP authentication is successful
- B. After Open System authentication
- C. After the 4-Way Handshake
- D. After any Group Handshake

Correct Answer: A

---

**QUESTION 4**

ABC Hospital wishes to create a strong security policy as a first step in securing their 802.11 WLAN. Before creating the WLAN security policy, what should you ensure you possess?

- A. Management support for the process.
- B. Security policy generation software.
- C. End-user training manuals for the policies to be created.
- D. Awareness of the exact vendor devices being installed.

Correct Answer: A

---

**QUESTION 5**

ABC Company is deploying an IEEE 802.11-compliant wireless security solution using 802.1X/EAP authentication. According to company policy, the security solution must prevent an eavesdropper from decrypting data frames traversing a wireless connection. What security characteristic and/or component plays a role in preventing data decryption?

- A. 4-Way Handshake
- B. PLCP Cyclic Redundancy Check (CRC)
- C. Multi-factor authentication
- D. Encrypted Passphrase Protocol (EPP)
- E. Integrity Check Value (ICV)

Correct Answer: A

---

**QUESTION 6**

Role-Based Access Control (RBAC) allows a WLAN administrator to perform what network function?

- A. Provide two or more user groups connected to the same SSID with different levels of network privileges.
- B. Allow access to specific files and applications based on the user's WMM access category.
- C. Allow simultaneous support for multiple EAP types on a single access point.
- D. Minimize traffic load on an AP by requiring mandatory admission control for use of the Voice access category.

Correct Answer: A

---

#### QUESTION 7

A large enterprise is designing a secure, scalable, and manageable 802.11n WLAN that will support thousands of users. The enterprise will support both 802.1X/EAP-TTLS and PEAPv0/MSCHAPv2. Currently, the company is upgrading network servers as well and will replace their existing Microsoft IAS implementation with Microsoft NPS, querying Active Directory for user authentication. For this organization, as they update their WLAN infrastructure, what WLAN controller feature will likely be least valuable?

- A. SNMPv3 support
- B. 802.1Q VLAN trunking
- C. Internal RADIUS server
- D. WIPS support and integration
- E. WPA2-Enterprise authentication/encryption

Correct Answer: C

---

#### QUESTION 8

What preventative measures are performed by a WIPS against intrusions?

- A. Uses SNMP to disable the switch port to which rogue APs connect.
- B. Evil twin attack against a rogue AP.
- C. EAPoL Reject frame flood against a rogue AP.
- D. Deauthentication attack against a classified neighbor AP.
- E. ASLEAP attack against a rogue AP.

Correct Answer: A

---

#### QUESTION 9

What WLAN client device behavior is exploited by an attacker during a hijacking attack?

- A. After the initial association and 4-way handshake, client stations and access points do not need to perform another

4-way handshake, even if connectivity is lost.

B. Client drivers scan for and connect to access point in the 2.4 GHz band before scanning the 5 GHz band.

C. When the RF signal between a client and an access point is disrupted for more than a few seconds, the client device will attempt to associate to an access point with better signal quality.

D. When the RF signal between a client and an access point is lost, the client will not seek to reassociate with another access point until the 120 second hold down timer has expired.

E. As specified by the Wi-Fi Alliance, clients using Open System authentication must allow direct client-to-client connections, even in an infrastructure BSS.

Correct Answer: C

---

#### QUESTION 10

What software and hardware tools are used in the process performed to hijack a wireless station from the authorized wireless network onto an unauthorized wireless network?

A. A low-gain patch antenna and terminal emulation software

B. MAC spoofing software and MAC DoS software

C. RF jamming device and a wireless radio card

D. A wireless workgroup bridge and a protocol analyzer

Correct Answer: C
