- D. boron monofluoride

Correct Answer: A

QUESTION 7

Select the correct word(s) for the blank in the following sentence. _____ went to the movies last weekend.

- A. She and I
- B. She and me
- C. Her and I D. Her and me

Correct Answer: A

QUESTION 8

Alfalfa thrives on land which contains lime, and gives poor results when this ingredient is deficient. The explanation is simple: there is a community of interest between the very low microscopic animal life, known as bacteria, and plant life, generally. In every ounce of soil there are millions of these living germs which have their allotted work to do, and they thrive best in soils containing lime. If one digs up a root of alfalfa (it need not be an old plant, the youngest plant will show the same peculiarity), and care is taken in exposing the root (perhaps the best method is the washing away of the surrounding earth by water), some small nodules attached to the fine, hair-like roots are easily distinguished with the naked eye. These nodules are the home of a teeming, microscopic, industrious population, who perform their allotted work with the silent, persistent energy so often displayed in nature.

Which of the following is an accurate paraphrasing of the underlined phrase?

- A. Many people are intrigued by the relationship between bacteria and plant life.
- B. Bacteria and alfalfa plants have a symbiotic relationship.
- C. Bacteria in alfalfa is worth studying.
- D. The gardening community is very invested in the bacteria found in alfalfa.

Correct Answer: B

QUESTION 9

In order for the actin filaments to bind to the myosin head, what must occur first?

- A. The sarcomere has to shorten.
- B. Calcium ions must bind to troponin molecules.
- C. Tropomyosin has to attach to the actin binding sites.
- D. Magnesium ions must be released by the sarcoplasmic reticulum.
- E. The Z line has to be lengthened to expose the actin binding site.

Correct Answer: B
