QUESTION 1

An organization needs to have backups span between different BasicDisk storage units. The "Allow backups to span disk" setting has been enabled in Host Properties. Which additional requirement must an administrator meet to allow backups to span disks?

- A. enable the "Enable standalone drive extension" setting in host properties
- B. put the BasicDisk storage units in a storage unit group
- C. create a disk pool with all the appropriate disk volumes
- D. configure the Media Server as a Storage Server

Correct Answer: B

QUESTION 2

Which value under Storage Unit Properties reflects the total amount of space allocated to a basic disk storage unit?

- A. Usable size
- B. Capacity
- C. Raw size
- D. Available or Available space

Correct Answer: B

QUESTION 3

An administrator has a backup policy with the following policy attributes: 3 paths listed in the Backup Selections list 5 clients listed in the Clients list Allow multiple data streams is selected Limit Jobs per policy is set to 4 How many jobs go Active when the job is started, excluding parent jobs?

- A. 3
- B. 4
- C. 12
- D. 15

Correct Answer: B

QUESTION 4

An administrator of a multi-site, multi-domain NetBackup environment wants to be able to provide redundancy for

backups as well as protecting the NetBackup image database. All backups must have on-site and off-site disk copies as well as off-site tape copies and must be restorable at all times, even if a single NetBackup server/storage failure occurs.

Which NetBackup feature should the administrator use to implement the functionality?

- A. Replication Director
- B. Automated Image Replication
- C. Storage Lifecycle Policies
- D. Vault

Correct Answer: B

QUESTION 5

What is the image removal behavior for relocated images from a disk staging storage unit when the high water mark is reached during a backup?

- A. NetBackup removes the oldest images until the low water mark is reached.
- B. NetBackup removes images alphabetically until the low water mark is reached.
- C. NetBackup removes the largest images until the low water mark is reached.
- D. NetBackup removes images with the lowest rank data classification until the low water mark is reached.

Correct Answer: A

QUESTION 6

Using the default values in the activity monitor, a failed job is discovered among hundreds of jobs that ran during the evening. The administrator would like to view all related jobs to verify they completed successfully. Where in the activity monitor can the administrator find all related jobs?

- A. right-click the failed job and select View Job hierarchy
- B. right-click the failed job and select Troubleshooter
- C. double-click the failed job and select the Detailed Status tab
- D. right-click the failed job and select Details

Correct Answer: A

QUESTION 7

How frequently does content router queue processing (CRQP) run, by default?

- A. every 6 hours

- B. every 12 hours
- C. every 24 hours
- D. every week

Correct Answer: B

QUESTION 8

Which two conditions must be met to change the volume group of a tape? (Select two.)

- A. backup tapes must be in the same library or standalone
- B. backup tapes must have barcode labels
- C. backup tapes must be unassigned
- D. backup tapes must be vaulted
- E. backup tapes must have the same media type

Correct Answer: AE

QUESTION 9

Which command is used to determine the state of an AdvancedDisk storage server?

- A. nbdevconfig
- B. nbdevquery
- C. nbemmcmd
- D. nbstserv

Correct Answer: B

QUESTION 10

Backup jobs end with the following series of messages in the Job Details:

Error bpbrm(pid=) db_FLISTsend failed: Unable to connect to the database (2505)

12/05/2013 15:39:45 - job 63389 was restarted as job 63390

Failed to get status code information (2505)

Which process is failing to respond?

- A. nbjm

- B. nbemm
- C. bpdbm
- D. bpbrm

Correct Answer: C

QUESTION 11

Auto Image Replication is being used to replicate New York backups to London. The New York backups have completed. What is the next step?

- A. images are replicated to London using a storage lifecycle policy to a disk staging storage unit
- B. images are replicated to London using a storage lifecycle policy to an AdvancedDisk type storage unit
- C. images are replicated to London using a storage lifecycle policy to a Media Server Deduplication Pool
- D. images are replicated to London using a storage lifecycle policy to an NDMP storage unit

Correct Answer: C

QUESTION 12

Which scenario accurately describes the creation of a full synthetic backup using tape?

- A. a single drive can be used for both the read and write of the backup
- B. a separate read drive and write drive can be used on the same Media Server
- C. a read and write drive can be used on different Media Servers
- D. a disk storage unit must be used prior to copying the backup to tape

Correct Answer: B

QUESTION 13

A storage unit group is configured that has disk and then tape listed. During a backup session, jobs start retrying and then running on the tape device only.

What is a likely cause of the change?

- A. The disk storage unit is full.
- B. The tape device was listed first in the storage unit group.
- C. The tape device was listed second in the storage unit group.

D. The disk storage unit is staging to tape.

Correct Answer: B

QUESTION 14

Which two appliance performance scenarios benefit from seeding the MSDP pool? (Select two.)

- A. new client backups over WAN
- B. new application backups over SAN
- C. new VADP VMWare backups using Media Server as the backup host
- D. new replication to a new DR site
- E. new clients with large file systems containing small files

Correct Answer: AD

QUESTION 15

The administrator of a large bank needs to preserve financial information for an extended period of time. The bank's NetBackup 7.6.1 catalog is now over 800GB in size, causing the catalog backups to contend for resources with production system backups.

How can the administrator shorten the time needed to back up the catalog?

- A. use the NetBackup 7.6.1 Agent for Symantec Enterprise Vault to perform an online archive of the catalog
- B. create a catalog archive policy and execute it from the command line using the bpcatarc command
- C. use the NetBackup 7.6.1 client-side deduplication feature to shorten the time it takes to perform a catalog backup
- D. back up the catalog by scheduling an online Sybase database backup policy to allow the backup to run without contending for resources

Correct Answer: B
