QUESTION 1

An organization needs to have backups span between different BasicDisk storage units. The "Allow backups to span disk" setting has been enabled in Host Properties. Which additional requirement must an administrator meet to allow backups to span disks?

- A. enable the "Enable standalone drive extension" setting in host properties
- B. put the BasicDisk storage units in a storage unit group
- C. create a disk pool with all the appropriate disk volumes
- D. configure the Media Server as a Storage Server

Correct Answer: B

QUESTION 2

Which command should an administrator run to display all images written to both disk and tape for a particular client?

- A. bplist
- B. bpimmedia
- C. bpimage
- D. bpstulist

Correct Answer: B

QUESTION 3

Refer to the exhibit.

An assigned backup tape contains four images, two of which are expired. A new backup is initiated. How does NetBackup write the new image?

- A. it appends new images to the last file marker on the tape
- B. it writes new images to the space where the expired images once resided on the tape

- C. it overwrites the expired data on the tape with the new images
- D. it writes the new image to an alternate tape

Correct Answer: A

QUESTION 4

Which disk backup method is unsupported with Media Server load balancing?

- A. BasicDisk
- B. Media Server Deduplication Pool
- C. AdvancedDisk
- D. OpenStorage

Correct Answer: A

QUESTION 5

Which operation compares the contents of an image to the NetBackup catalog?

- A. Verify
- B. Duplicate
- C. Import
- D. Rehydrate

Correct Answer: D

QUESTION 6

Weekly full backups run for clientA on master1 using a storage unit that belongs to medial. The administrator is required to retain clientA's full backups for a period of four months. When the administrator modifies the Full schedule, four months is missing from the selection list. Where should the administrator add the four-month retention period under Host Properties?

- A. Master Servers > master1 > Retention Periods
- B. Clients> clientA > Global Attributes
- C. Media Servers > medial > Retention Periods
- D. Master Servers > master1 > Global Attributes

Correct Answer: A

QUESTION 7

A VMware policy has been configured to back up a Linux virtual machine. Which condition must be met to ensure all data is flushed from memory to disk?

- A. SYMC quiesce utility must be installed
- B. exclude swap and paging files must be unchecked
- C. the virtual machine must be running RedHat Enterprise Linux
- D. VMware Tools services must be stopped

Correct Answer: A

QUESTION 8

Backups of a newly added Windows Server 2008 guest virtual machine are failing with the following status:

156:

snapshot error encountered The associated bpfis process log indicates that the attempt to quiesce this virtual machine failed. Which two steps should the administrator review to help resolve the issue? (Select two.)

- A.
VMware Tools is installed and running in the virtual machine
- B.
disable Block-Level Incremental Backup in the policy
- C.
install the NetBackup plug-in for vSphere Web Client on the guest virtual machine
- D.
verify Microsoft Volume Shadow Copy Service within the guest virtual machine is working properly
- E.
enable snapshotting of the virtual machine's memory on the vCenter server

Correct Answer: AD

QUESTION 9

What is required to implement Auto Image Replication?

- A. BasicDisk or AdvancedDisk storage units and at least one Master Server

- B. OST-compliant appliances or MSDP and at least one Master Server
- C. OST-compliant appliances or MSDP and at least two Master Servers
- D. BasicDisk or AdvancedDisk storage units and at least two Master Servers

Correct Answer: C

QUESTION 10

An administrator wants to review the throughput of backup clients to improve performance. Which area of the NetBackup Administration Console displays the throughput of backups for all clients?

- A. Status of Backups
- B. Device Monitor
- C. All Log Entries
- D. Client Backups

Correct Answer: C

QUESTION 11

An administrator tries to suspend an active job from the NetBackup Activity Monitor, but discovers that the option is grayed out.

What is preventing the administrator from suspending the job?

- A. child jobs are still active
- B. the parent job is still active
- C. Multiplexing is enabled
- D. Checkpoint restart is disabled

Correct Answer: D

QUESTION 12

How should an administrator limit the total number of backup or duplication jobs that write to or read from an AdvancedDisk pool concurrently?

- A. set the Maximum concurrent jobs value on the Disk Pool
- B. set the Maximum 1/0 streams value on the Disk Storage Server
- C. set the Maximum 1/0 streams value on the Disk Pool

D. set the Maximum concurrent jobs value on the Disk Storage Server

Correct Answer: C

QUESTION 13

A Windows policy protects over 100 servers using the directive ALL_LOCAL_DRIVES. The backup window for this policy is a two-hour window that is unused by any other policy. When the jobs run, the overall performance of the disk storage unit is degraded. Which setting should the administrator modify to reduce the number of concurrent streams writing to the disk storage unit to 10 during the backup window?

- A. enable the "Maximum Data streams" property
- B. enable the "Limit Jobs per policy" attribute
- C. set the "Maximum jobs per client" host property to 10
- D. enable multiplexing for the storage unit and set the value to 10

Correct Answer: B

QUESTION 14

An administrator took Media Server, mediaA, offline for maintenance and set up a new Media Server, mediaB, with access to the previously backed up data. When restores are performed for data that was backed up by mediaA, the restores fail.

Which setting in the Host Properties must the administrator modify to allow successful restores?

- A. From the Master Server, run the bpimage command to change the name of the Media Server from mediaA to mediaB.
- B. Verify both Media Servers are set up in the Media Server Host Properties > Restore Failover section.
- C. In the BAR GUI, change the "Server to use for backup and restores" setting to MediaB.
- D. Verify both Media Servers are set up in the Master Server Host Properties > Restore Failover section.

Correct Answer: D

QUESTION 15

An administrator has an environment that runs over one thousand jobs a night. Some nights there are hundreds of jobs queued waiting for a resource.

Which action should the administrator take in the event that specific jobs need to run when a resource next becomes available during that evening's backup session?

- A. suspend the job and resume the job after changing the policy job priority
- B. change the job priority for the job in the policy
- C. increment the job priority in the activity monitor for the job
- D. cancel the job and restart the job after changing the policy job priority

Correct Answer: C
