QUESTION 1

Which of the following Veeam Backup and Replication jobs can be set up to support GFS retention? (Choose

two.)

A. Backup Copy

B. Backup

C. Backup to tape

D. Replication

E. Configuration Backup

Correct Answer: AB

QUESTION 2

Which cryptographic algorithm is used in Veeam Backup and Replication for backup-to-disk backup files?

A. RSA

B. AES-256

C. Blowfish

D. MD5

E. DES

Correct Answer: B

QUESTION 3

A scale-out backup repository is configured with data locality policy. How is an extent selected during an active full
backup? (Choose two.)

A. Always the same extent as the previous full backup

B. An extent determined based on load control settings and free space

C. A different extent from the previous chain to avoid single point of failure, if possible on free space

D. It tries the same location as the previous full if using a deduplication appliance

Correct Answer: AB

QUESTION 4

Which statements are true regarding vPower for VMware vSphere? (select three)

A. vPower is not supported for non-ESXi version of VMware vSphere.

B. vPower is used to enable Instant VM Recovery.

C. vPower is used to recover files from tape.

D. vPower always uses NFS to mount VM(s) from a Backup Repository.

E. vPower is used to enable SureBackup recovery verification.

Correct Answer: ABC

QUESTION 5

In the VeeamWAN folder created by the Veeam Backup and Replication WAN accelerator, select the correct type of source and target data stored in the VeeamWAN folder:

Hot Area:

Answer Area

Source

| Global cache data |
| Digest Files |

Target

| Global cache data |
| Digest Files |

Correct Answer:

Answer Area

Source

| Global cache data |
| Digest Files |

Target

| Global cache data |
| Digest Files |

QUESTION 6

Which of the following describes the Partial Site Failover functionality of Veeam Cloud Connect?

A. One or several VMs become corrupted and fail over to their replicas on the cloud host, while other VMs will still be running in the production site.

B. One or several applications malfunctions and they start running from a web server in cloud set up by SP.

C. End users are able to failover to the DR site proactively if they know that the primary VMs are going to go offline (e.g. the production_host is going to be patched)

D. A cluster is formed out of hosts on the production site and cloud hosts to in case of one or several hosts malfunctions the workloads are passed to the cloud.

Correct Answer: A

QUESTION 7

Which of the following statements regarding encryption in Veeam Backup and Replication are true? (Choose

three.)

A. If data is encrypted at rest, it means a Backup to Tape job is storing encrypted backups on tape

B. If data is encrypted at rest, it means a Backup Job targeting a Backup Repository has encryption enabled

C. A Backup Jab has encryption enabled and is used at the source for a Backup to tape Job. If the Tape Media Pool has encryption enabled, the data will be encrypted a second time

D. A Backup Jab has encryption enabled and is used at the source for a Backup to tape Job. If the Tape Media Pool has encryption enabled, the data will be not encrypted a second time

E. To ensure backups stored on tape are encrypted, enable encryption in the Backup to Tape job

F. To ensure backups stored on tape are encrypted, enable encryption in the Tape Media Pool

Correct Answer: ACF

QUESTION 8

Which of the following conditions require Microsoft VSS rather than VMware Tools quiescence? (Choose the 2 appropriate options)

A. Exchange server backup logs truncation is necessary

B. The backup data is to be encrypted

C. Point-in-Time Restore for Microsoft SQL Server is required

D. Reverse Incremental backup mode is used

E. The VM in question utilizes Linux as a guest operating system

Correct Answer: BE

QUESTION 9

What is replica metadata used for?

![Pass2Lead](https://Pass2Lead.com)
A. Storinga set of VM configuration files

B. Storing replica temporary cache

C. Detecting changed blocks of data between two replica states

Correct Answer: C

Replica metadata used to store replica checksums. Veeam Backup and Replication uses this file to quickly detect changed blocks of data between two replica states. A metadata file is written to the backup repository. References:

QUESTION 10

Which of the following is an extension for a full backup file if the Reverse Incremental Backup mode is used?

A. .vbr

B. .vbi

C. .vbk

D. .vrb

Correct Answer: C

QUESTION 11

Which of these statements regarding Veeam ONE Custom Alerts are true? (select three)

A. Custom Alerts support Trigger type: Rule for specific conditions or state

B. Custom Alerts support rule condition: VMware VM tools out of date

C. Custom Alerts support Trigger type: Event based rules

D. Custom Alerts support rule condition: Resource usage is out of allowed range

E. Custom Alerts support rule condition: Snapshot size for VM is inside allowed range

Correct Answer: BCD

QUESTION 12

Which of the following are benefits of using DD Boost integration with Dell EMC Data Domain in Veeam Backup and Replication? (Choose three.)

A. Lower network usage

B. Enhanced synthetic full backup creation

C. Support for Reverse Incremental Backup Mode

D. Lower Recovery Time Objective (RTO)

E. Managed File Replication leveraged by Backup and Replication for Backup Copy Jobs

Correct Answer: BCE

QUESTION 13

Which of the following are true regarding Quick Backup? (Choose two.)

A. Quick Backup can be run for both incremental and reverse incremental backup chains.

B. A full backup file will be created if one does not already exist.

C. Quick Backup is supported for separate vCloud Director VMs as well as for vApps.

D. From the retention policy perspective, a partial restore point created by Quick Backup is grouped with a regular restore point neighboring it.

Correct Answer: AD

QUESTION 14

Which is the main advantage of using SAN snapshots for backups?

A. Speeds up the backup process.

B. Decreases the amount of time the VM is running on a VMware snapshot.

C. Helps you avoid creating a VMware snapshot.

D. Saves space in the repository.

Correct Answer: B

QUESTION 15

During the SureBackup job execution, redo logs are created for each verified VM. Where are the redo logs for the job located?

A. In a special folder of the Backup and Replication server

B. In the backup file itself

C. On the datastore specified in SureBackup job settings

D. On the backup repository

E. On the datastore specified in Virtual Lab settings

Correct Answer: D
